SAP BusinessObjects

SAP BusinessObjects Business Intelligence Suite 4.0 Support Package 4 Patch 6

- Release Notes

SAP

Copyright:

11/2/2012

About these Release Notes

These Release Notes contain important information about known issues, fixed issues and design limitations present in SAP BusinessObjects BI 4.0 Patches. To see whether known issues in one Patch are fixed in a subsequent Patch, use the ADAPT number of the known issue to search within the PDF.

Only the last four Patches are available on SMP at any moment. If you expect that you will need an additional installation at a later time, download all relevant patches from the same Patch Level at the same time as older Patches will not be available on SMP once they are removed.

Before installing the software, we recommend that you read the entire document.

Where to find more information about this release:

For information on	See
Installing this release	http://service.sap.com/~sapidb/ 011000358700000646492012E/ xi4sp4_bip_patch_update_en.pdf

Known Issues and Limitations for SAP BusinessObjects Business Intelligence Suite 4.0 Support Package 4 Patch 1

Editing Existing Job Limitations

ADAPT01628880

Edit Existing Job Workflow with Following Entries in Add Manage Systems

1) If you have IP address Entry in Manage System and Existing Job Source and Destination is having Fully qualified system name then works fine

2) if your entry is Fully qualified system name in add manage system and your existing job sourc/destination is having Ip address then also works fine.

In below scenario it fails:

Edit Existing Job Workflow with Following Entries in Add Manage Systems

1) If you have IP address Entry in Manage System and Existing Job Source and Destination is having Fully qualified system name then works fine

1) if your entry is Fully qualified system name or IP address in add manage system and your existing job's sourc/ destination is conatins hostname(not fully qualified) thenit fails.

Web Intelligence: Error when trying to use the Member Selector for BEx queries that use a mandatory variable but no default value

ADAPT01643403

The ProcessDPComand error message appears when you try to open the Member Selector for a BEx query that contains a mandatory variable without a default value. You must open the Set Variables pane in the Query Panel and enter a default value in the Set Variables pane before you can open the Member Selector.

Prerequisite for avoiding subsequent errors in the authentication plugin - ensure that the BOE groups are in synch

ADAPT01644195

 The groups have to be deleted manually from BOE before applying the patch (i.e. the patch does not fix the situation when the groups are out of synch before being applied, so the user has to ensure that everything is clean before installing the patch).

Problems encountered with Java components after the application of Patch updates

ADAPT01652210

On Windows systems, under some circumstances SP04 Patch updates may not be applied properly. After the update some servers may not start as expected, or a message will appear saying that the system needs to be rebooted for the update to complete. This issue only affects the update of Java components. This will most likely occur in one of the following scenarios:
- Installing the Patch immediately after (within 30 minutes) having installed the base product.
- Adding a Crystal Report with dynamic cascading parameters to a 4.0 system (any SP level), either through the CMC, BI Launch pad, Crystal Reports Designer or a custom SDK application, and then applying the Patch update within the next 30 minutes (approximately).

To avoid this issue it is reccomended that users restart their system before running the Patch update installation. If this issue occurs, users can run the installation repair utility from the Windows Control Panel > Add/Remove programs area. Make sure to select the full installation entry for your BI platform, and not a Patch or Support Package entry.

Known Issues and Limitations for SAP BusinessObjects Business Intelligence Suite 4.0 Support Package 4 Patch 2

CMS crashes during Server Intelligence Agent start up when using HANA SPS4 as the CMS database on AIX 6.1

ADAPT01644012

The CMS crashes during Server Intelligence Agent start up when using HANA as the CMS database on AIX. This did not occur on other supported platforms. This issue occurs on AIX 6.1 for versions of HANA SPS4 before revision 34. The fix will be included in HANA revision 34.

Dashboard looses Prompt binding when migrated to SP04, if the prompts defined in IDT are not allowed to enter custom value

ADAPT01651052

When opening a dashboard model created using Dashboards SP02 in Dashboards SP04, prompt defined in Add Query may lose binding if the prompts defined in IDT are not allowed to enter custom value.
In Edit prompt dialog, if prompt option "Select only from list" is checked, then the prompt will be not allowed to bind to spreadsheet table because it cannot accept custom value.
The workaround is to reopen the dashboard model in SP04, make sure that the prompt option "Select only from list" is unchecked, then re-bind the prompt and save the dashboard.

BW Keyfigure with multiple datatypes

ADAPT01652104

For datasource Cube with BEx queries, BW Keyfigure are mapped to standard Business Object measure. The latter have a type (string,date,numeric) depending on BW keyfigure datatype (Amount,Quantity,Number,Integer,DATS,TIMS).

If the BW keyfigure have multiple datatypes, the BO measure type would be String.

For example a BEx query with a single characteristic in row with two selection A and B; a keyfigure KF in column; a cell on selection A returning the current date and a cell on selection B returning current revenue. When creating a WebIntelligence/Crystal/Dasboard document on this BEx query, the keyfigure will have type String.

The BO measure can be converted via a formula into different datatype in the report.

SAP Range Variable Report Compatbility Issue

ADAPT01656594

There are compatibility issue with report using SAP range variables. Report may not load. Users are recommended to wait for the fix available in the next patch if they are concerned.

Known Issues and Limitations for SAP BusinessObjects Business Intelligence Suite 4.0 Support Package 4 Patch 3

Platform Search: Content indexing of the .xlsx file with size greater than 2 MB crashes Adaptive Processing Server (APS) with default APS configuration

ADAPT01658458

Content indexing of the .xlsx file with size greater than 2 MB with default APS configuration causes higher memory utilization of APS, and results in APS crash.

To workaround this issue, perform one of the following tasks:

• Host BI Platform Search as a standalone service in the designated APS by allocating 1 GB memory.
• If BI Platform Search is one of the services hosted in common APS, then increase the memory allocation for APS to 2 GB.

MSAS member unique names are added to hierarchy member descriptions

ADAPT01660535

When using Analysis, edition for OLAP to create a workspace off Microsoft SQL Server Analysis Services, which contains two hierarchies from the same dimensions, member unique names are added to the hierarchy member descriptions resulting in the very long member names and thus reducing the usability of the workspace. The issue will be addressed in subsequent Patch 4.4 release to avoid adding member unique names to member descriptions, and thus improve the usability of the workspace.

Known Issues and Limitations for SAP BusinessObjects Business Intelligence Suite 4.0 Support Package 4 Patch 4

Web Intelligence : JRE is no longer installable on the client machine via the applet

ADAPT01636098

In previous versions of Web Intelligence, if your client machine did not have a JRE installed, when you tried to download the Rich Internet Application (java applet) from Microsoft Internet Explorer, you would get a message with a link allowing to install it from the server.

Starting from Patch4.4 and SP05, if you do not have the JRE installed, you must retrieve it (http://www.oracle.com/technetwork/java/javase/downloads/index.html) and install it yourself.

For information on the supported JRE versions, refer to the Product Availability Matrix (PAM) and ensure you are installing a supported one.

Enabling statistics for Analysis, edition for OLAP on an SAP BW server

ADAPT01650240

To enable statistics on an SAP BW server for Analysis, edition for OLAP, you must configure the mdas.properties file for the BI platform server. For detailed instructions, refer to the 'Enabling statistics for Analysis on an SAP BW server' section of the SAP BusinessObjects Analysis, edition for OLAP Administrator Guide.

Known Issues and Limitations for SAP BusinessObjects Business Intelligence Suite 4.0 Support Package 4 Patch 5

Dashboards view failed after migrating the universe using LCM

ADAPT01658860

when deleted an universe from Aurora BOE SP04, then migrate the deleted universe from another Aurora BOE SP04 using LCM. Re-login the BOE, refreshing the dashboard which consumed the deleted universe, the dashboard might prompt the error message("Could not connect to BusinessObjects server; Check your network connection. (XLS 000003). Could not connect to BusinessObjects server; Check your network connection. (XLS 000003) A request was cancelled. The necessary security privileges could not be verified. [RCIRAS0225]").

Workaound:
When dashboards prompt the error message, restart all Xcelsius servers, then re-login the BOE.

For more detail information, please refer to http://wiki.sdn.sap.com/wiki/display/BOBJ/How+to+Migrate+and +Upgrade+Dashboards .

Known Issues and Limitations for SAP BusinessObjects Business Intelligence Suite 4.0 Support Package 4 Patch 6

Life cycle management breaks when configured with ISA reverse proxy server .

ADAPT01524137

Life cycle management breaks when configured with ISA reverse proxy server .
The below steps need to be followed to make it work

1.Stop tomcat .
2.Navigate to folder -> C:\Program Files (x86)\SAP BusinessObjects\Tomcat6\webapps\BOE\WEB-INF\eclipse\plugins\webpath.LCM\web\WEB-INF
3.Take a back up of web.xml
4.Modify web.xml - add/insert the below line at the end (i.e between </jsp-config> </web-app>)

```
    <filter>
        <filter-name>LCMCacheControleFilter</filter-name>
        <filter-class>com.businessobjects.lcm.LCMCacheControleFilter</filter-class>
    </filter>

    <filter-mapping>
        <filter-name>LCMCacheControleFilter</filter-name>
        <url-pattern>/*</url-pattern>
    </filter-mapping>
```

5.Remove the folder -> C:\Program Files (x86)\SAP BusinessObjects\Tomcat6\work\Catalina\localhost\BOE
6.Start tomcat

Web Intelligence: Query sort is not supported in the Query Panel

ADAPT01667254

In the user guide, the section entitled "To sort query results" is incorrect, the query sort is not supported from the Web Intelligence Query Panel.

Fixed Issues for SAP BusinessObjects Business Intelligence Suite 4.0 Support Package 4 Patch 1

ADAPT01446778

Description:

After migration using Upgrade management tool, the third party authentication users such as Windows AD lose relationship to their user group. The result is that theses users will not be able to log on to the Central Management Server (CMS).

New Behavior:

The problem is resolved.

Limitations:

ADAPT01552208

Description:

In the information design tool, when accessing a repository with a cluster name different from the server name, multiple login dialog boxes appear even if the user has already logged in.

New Behavior:

This problem is resolved.

Limitations:

After the fix is installed, it is recommended to delete any existing sessions in the Repository Resources View, and re-insert them.

ADAPT01588819

Description:

In Web Intelligence reports, the "UserResponse()" function returns the entered value in scientific notation. For example, 12 appears as 1.2e1.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01592546

Description:

The 'Keep Last values' property does not work for a query prompt when 'Refresh on Open' is also selected for the Web Intelligence report

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01599452

Description:

Hyperlinked Web Intelligence document shows in the first Web Intelligence document window. Two Web Intelligence documents are nested in the same window.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01609842

Description:

When rescheduling a Web Intelligence instance with the "Comma Separated Values (CSV)" output format selected, the "Column delimiter" list in the Schedule dialog box contains only the "," (comma) option. The resulting successful instance displays text as comma delimited, instead of in columns separated by tabs.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01611686

Description:
When using a Crystal Reports report that contains a subreport to create a publication with a personalization filter, the following delivery rule is ignored:
"Deliver only if report contains data."

New Behavior:

This problem is resolved.

Limitations:

ADAPT01620121

Description:
Folder should be displayed in Content tab

New Behavior:

Folder should be displayed in Content tab

Limitations:

ADAPT01622938

Description:
Users cannot create a Web Intelligence report with prompts in the Integration Option for Microsoft SharePoint software.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01625266

Description:
Return SAP BEx variables in original variable sequence order as defined within the BEx query

New Behavior:

Previously variables were being returned in dependency order. A user can define the variable sequence within a BEx query. Now that sequence is respected within query panel and within Crystal Reports for Enterprise.

Limitations:

ADAPT01628001

Description:
As of today in TM, with a wid document, you can create variable.
This variable you should be able to translate with TM.

New Behavior:

This problem is resolved

Limitations:

ADAPT01628046

Description:
When upgrading an existent BI4 system with the installer, the installer does not install all files and files are left in the .../setup/packagestemp folder

New Behavior:

This issue has been fixed.
Limitations:

ADAPT01628522

Description:
When editing or promoting an existing promotion job, if the source system is down, the edit/promote page never stops loading and there is no way to cancel the task except refreshing the CMC page. In this case, should prompt proper error message if the source system is not accessible

New Behavior:
New Patch will Gives Proper error messages when Source CMS is down

Limitations:

ADAPT01628880

Description:
Edit works with fully qualified name and IP.

New Behavior:
User will be able to edit LCM job in promotion management

Limitations:
Failed in corner case scenario-- If host name is added to manage system and source login as full-name an IP , (showing error source has been removed by administrator, but it is allready added with host entry).

ADAPT01630520

Description:
When the users drill down in a webi report with "use query drill" enabled, the data is not seen in the report.
However, it works fine with scope of analysis.
It is observed that it is adding 5:30 Hours to the query filter (Instead of 12:00 AM it adds DATE+5:30 hrs and thus doesnot bring any data)

New Behavior:
the issue is fixed

Limitations:

ADAPT01630884

Description:
The synonym column values do not display in the universe design tool.

New Behavior:
This problem is resolved.
Set the Include Synonyms parameter of the oracle.sbo file to True on both SAP BusinessObjects Client and Server machines. The file is located in the bip-install-dir\SAP BusinessObjects Enterprise XI 4.0\dataAccess \connectionServer\oracle directory.

Limitations:
When the parameter is set to True, the table columns are duplicated in the Table Browser. However, the resulting universe works correctly.

ADAPT01631272

Description:
In the information design tool, after the converting a .unv universe, the check integrity in the data foundation returns errors concerning the data type of the columns.

The problem happens because the conversion uses the data types defined in the .unv universe, which don't necessarily match the data types in the data source.

New Behavior:

Numeric data types are now properly converted to numeric in the data foundation. To resolve all data type conversion issues in the check integrity, do a refresh structure of the data foundation after conversion.
Limitations:

ADAPT01631555

Description:
Customer will get getPreferredViewingLocale() locale error in dashboard if they set BI launch pad preferences as "local to web browser"

New Behavior:

Issue is fixed.

Limitations:
Issue is fixed.

ADAPT01631948

Description:
DB data is not updated correctly in live office while secondly refreshing for opened LiveOffice document .

New Behavior:

DB data should be update correctly in LiveOffice while secondly refreshing for opened LiveOffice document.

Limitations:

ADAPT01633799

Description:
Error Message during preparation step: Upgrade process has been interrupted by an error: A runtime Exception has occured in the Object Manager. NULL

New Behavior:

The issue is resolved

Limitations:

ADAPT01634054

Description:
API property to allow upload of unmanaged reports to BOE.

New Behavior:

If property is set, BOE will allow upload of unmanaged reports.

Limitations:

ADAPT01634115

Description:
When both an object based on "Analytic Functions with distinct syntax" and an object based on "Aggregate Functions" are used in a query, the group by clause is correctly set in the SQL statement.

New Behavior:

The problem is solved.

Limitations:

ADAPT01634229

Description:
In Web Intelligence reports based on a BICS connection with hierarchical node variables, the selection of the root node of the hierarchical variable can generate an exception when running the report.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01634556

Description:
In the User Prompt Input panel (Web Viewer), the (--Show List Of Values--) is not available so that the user has to click on the (--More Values--) to select any values other than the original ones.

New Behavior:

This issue is solved.
For hierarchical List Of Value, the members of first level is shown. If user wants to see deeper level values, he has to click on "More Values" link.

Limitations:

ADAPT01634646

Description:
Excel documents generated after scheduling a Web Intelligence document can be corrupted.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01634808

Description:
When an input control based on a variable that has at least two possible outcomes is added to Web Intelligence report based on a BEx query, in certain situations causes more than one filter based on the input control to be applied at a given time.

In a Web Intelligence report based on a BEx query data source, when different filters are selected, the previous filter is not removed. This can result in multiple input control filters being applied to the filter associated with the input control

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01634832

Description:
A corrupted Excel file may generated be when exporting a WebIntelligence document with brackets characters in hyperlinks to Excel 2007 format.

New Behavior:

The problem is resolved.

Limitations:

ADAPT01634858

Description:
To be able to schedule a Web intelligence document based on a BW Universe (UNV) after applying FP03.

New Behavior:

Problem is resolved

Limitations:

ADAPT01634948

Description:
Error occurs when a business layer is created on top of an EPM Business Financial 10 for MSAS 10. Some metadata (apart from measures) are prevented from being used in filters in query panel.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01635209

Description:

With the following screen resolution: 1024 * 768, the Ranking window is displayed partially with Dhtml mode.

New Behavior:

This problem is solved.

Limitations:

ADAPT01635365

Description:

When user views a Crystal Report document or Web Intelligence document in BILaunchpad via Weblogic plugin for Apache displays only a blank browser window and viewer doesn't load.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01635564

Description:

Crystal Reports for Enterprise crashes when previewing a report with one or more subreports. This happens when Crystal Reports for Enterprise consumes more than 700 MB of memory regardless if the report has subreports or not.

New Behavior:

The problem is resolved.

Limitations:

ADAPT01635624

Description:

A-OLAP no longer throws an error when adding hierarchies to crosstab analysis.

New Behavior:

Hierarchies from customer BW datasource can be added to crosstab analysis without putting A-OLAP in an invalid state.

Limitations:

ADAPT01636379

Description:

In Web Intelligence documents based on a BEx query, choosing a prompt value that contains the plus sign character (+) in the member key returns an error.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01636405

Description:

 Upgrade management fails to promote Life Cycle management jobs with timeout error message

New Behavior:

Issue is resolved

Limitations:

ADAPT01636411

Description:

The upgrade management tool displays the error "MigrationException$ThrowableWrapper: java.lang.NullPointerException" when you migrate an AFDashboardPage object.

New Behavior:

The problem is resolved.

Limitations:

ADAPT01636566

Description:

Error occurs when the driver for Financial Consolidation 10 for Microsoft Platform is used to report on a Microsoft Analysis Services cube and the designer drops details/attributes as result objects of the query. The value of the details/attributes are not coming through.

New Behavior:

This problem is resolved.

Limitations:

There are no known limitations.

ADAPT01636658

Description:

Error 'WIS_30270 processDPcommandsEX' in Web Intelligence based on a BEx query via a BICS connection type.

New Behavior:

No error message

Limitations:

ADAPT01636684

Description:

now lcm biar file getting recorded in destination and also in history it is getting sucess

New Behavior:

now lcm biar file getting recorded in destination and also in history it is getting sucess

Limitations:

ADAPT01636825

Description:

The Crystal Reports for Enterprise may unexpectedly shutdown if you try to create a Universe report after you have closed an unsaved BICS report.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01637106

Description:

After configuring the SSL protocol, launching Web Intelligence Rich Client results in the following error: "SSL mode is being requested but the following argument(s) are not present: passphrase (FWM 01012)"

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01637195

Description:

Stylesheet is not being applied to BI Launch Pad logon page if launched from a Favourites shortcut in Internet Explorer

New Behavior:

This issue is resolved.

Limitations:

ADAPT01637226

Description:

In Analysis, edition for OLAP, when you connect to an SAP BW data source, date values in the analysis window are always displayed in the dd.mm.yyyy format.

New Behavior:

You can log onto the SAP BW server and use the SU01 transaction to set the preferred format for displaying dates in workspaces that are connected to that SAP BW server.

Analysis uses the same date format for displaying all date values and members in a workspace. If you connect to multiple SAP BW data sources with different date format settings, all dates are displayed using the format for the first SAP BW data source that you connected to. If you want to use the date format for a different SAP BW data source, you must create a new workspace and connect to that data source first.

Note: the date format that you specify in the SU01 transaction does not apply to the "Prompts" dialog box for an SAP BW data source with prompts. Values for date prompts in this dialog box are always formatted as yyyymmdd. See the fixed issue note for ADAPT01662017 for more information.

Limitations:

ADAPT01637289

Description:

When saving a chart in Crystal Reports for Enterprise, the application may fail.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01637379

Description:

When remapping to a new report datasource and additional parameters are added, if there are parameters that have dependencies on other parameters an error occurs.

New Behavior:

The issue is resolved.

Limitations:

ADAPT01637486

Description:

Null pointer exception was seen while migrating universe which has a failed document

New Behavior:

The issue is resolved

Limitations:

ADAPT01637488

Description:

The upgrade management tool does not migrate a user when the user preferences set the default view to an object and then recommit the preference settings after the object's deletion. This causes the user's default view to point to an empty value.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01637490

Description:

In some cases, the upgrade management tool fails to migrate a publication object that contains an invalid ID for a child object.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01637493

Description:

The upgrade management tool does not capture all error messages from object plug-ins.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01637496

Description:

When you select a small subset from a large number of available objects on the "Select Object" page in the upgrade management tool, the "Statement too complex" error may be displayed when you attempt to navigate to the next page.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01637503

Description:

The Java process of the upgrade management tool does not terminate during an attempt to close the application after an extended idle period during a long migration job.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01637685

Description:

When two users are viewing dashboards with DSL queries, only one job is displayed under the following metric: Dashboards Processing Server > Number of open jobs.

New Behavior:

This problem is resolved. There is now one job for each user.

Limitations:

ADAPT01637703

Description:

For a universe connection with authentication mode set to "Use BusinessObjects credential mapping", after a user views the universe data, a second user may be able to view the universe data instead of being shown an error.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01637717

Description:

When the variable dependencies for SAP BW are turned off for Crystal Reports for Enterprise, previously set values may be incorrectly removed.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01637724

Description:

If a BEx query in Crystal Reports for Enterprise contains a keydate and a hierarchy, and the user clears the keydate's default value from the query panel without replacing it, the available hierarchies are not visible.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01637775

Description:

In WebIntelligence with dhtml client, The input control is saying that the values are obsolete.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01637971

Description:

LCM overrides was not updating Message server name and system ID fields

New Behavior:

LCM overrides is updating Message server name and system ID fields

Limitations:

Do not edit Server Type property in the edit window.If the user edits the server type property,the following changes will be seen:
1)In the destination, the connection properties page in CMC, can see the Group name property disapper.
2)New property name System number is added.
3)Message Server property label is changed to Server.
4)Server Type property is changed(takes some value in the drop down list)
5)for universe message server connections message server name in destination is not updating

ADAPT01637995

Description:

When a session is expired or invalid, opened jobs may not be cleared properly.

New Behavior:

In the CMC process server properties tab, set "Idle Job Timeout" to a small value such as 2 minutes. This will clear the jobs when the session is expired or invalid.

Limitations:

ADAPT01638009

Description:

Dashboard unable to handle Dashboard Design Processing Server error messages correctly

New Behavior:

Dashboard could handle Dashboard Design Processing Server error messages correctly

Limitations:

ADAPT01638126

Description:

In some WebIntelligence heavy load scenarios, Netweaver J2EE engine could hang.

New Behavior:

This issue is now resolved.

Limitations:

ADAPT01638177

Description:

Measure attributes with units are being displayed properly in query panel

New Behavior:

Unit of measure is shown in query panel when creating/editing BICs report

Limitations:

ADAPT01638206

Description:

Universe queries triggered by cell value will send more than two requests

New Behavior:

Universe queries triggered by cell value will send one request

Limitations:

ADAPT01638222

Description:

When scheduling a SAP BW query Web Intelligence report using a universe (unv) and keydate, the users want to use the default of current date and set a recurring schedule.

New Behavior:

Problem is resolved

Limitations:

ADAPT01638224

Description:

Receiving sporadic errors when editing Web Intelligence reports in Interactive (web) mode.

New Behavior:

The issue is solved

Limitations:

ADAPT01638260

Description:

If while saving a Web Intelligence document the Auto Save duration has been exceeded, the Web Intelligence Processing Server crashes

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01638786

Description:

After upgrading to xi 4.0 FixPack 03, the RunningSum aggregate function does not always work correctly. It can return the #UNAVAILABLE error.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01639122

Description:

Drill filter is added into query as branch of "OR" operator when using query drill in webi document, as a result of which other filters will be ignored.

New Behavior:

the issue is fixed

Limitations:

ADAPT01639279

Description:

When you create a universe based on a SAP BEX query with a date optional variable the date filter automatically created fails to be parsed with the following error message: "Exception: DBD, The value entered is not Valid. It must adhere to one of the following formats:YYYYMMDD DD.MM.YYYY State: N/A' is raised."

New Behavior:

This issue is resolved

Limitations:

ADAPT01639489

Description:

Migrated Xcelsius objects that are saved as Dashboard objects get deleted from the repository after a certain period of time

New Behavior:

This issue is resolved.

Limitations:

ADAPT01639590

Description:

The issue is fixed as in the inbox & my favourites when we go inside the sub-folders,and try to search it is successfullly getting searched

New Behavior:

The issue is fixed as in the inbox & my favourites when we go inside the sub-folders,and try to search it is successfullly getting searched

Limitations:

ADAPT01639601

Description:

Date Modified property for the BOE servers changed for no apparently reason. This was due to various pollings performed by intyernal threads in order to update the server's alive status or info on the auditing data retrieval

New Behavior:

The DateModified timestamp is now modified only if there are real modifications on the server objects.

Limitations:

ADAPT01640108

Description:

UMT fails after preparing phase,when migrating a universe with missing dependencies

New Behavior:

The specific error is reported in the finish screen in the object log tab

Limitations:

ADAPT01640858

Description:

The CSV OpenDriver and the SAP ERP driver rely on a directory to write temporary data for sorting operations (ORDER BY, GROUP BY, and DISTINCT) that involve a big amount of data. Each time the internal buffer exceeds the Bucket Split Size parameter value or the available internal memory, records are sorted and written into a file on the disk. Once all records are sorted, the result is read from the bucket files on the disk. A problem occurs when the operating system does not define any default directory for temporary data, which can happen on Linux systems.

New Behavior:

The cs.cfg file provides the "Temp Data Dir" parameter to specify the directory path for temporary data written on the disk:

Use this parameter if the operating system does not specify any default temporary folder.
The parameter is commented out. Remove the comment syntax to enable the parameter.
Limitations:
This parameter is only used by the CSV OpenDriver and the SAP ERP driver.

ADAPT01640910

Description:
When a Business Layer with connector parameters modified in Data Federator is published from Information Design Tool, the modified connector parameters are lost and replaced by default parameters.
New Behavior:
This problem is resolved. The Data Federator connector configuration is published with the modified parameters.
Limitations:

ADAPT01641179

Description:
The "Measure Format" dialog box in Analysis, edition for OLAP shows only the leaf nodes for hierarchical key figures.
New Behavior:
This problem is resolved. The "Measure Format" dialog box shows all nodes for hierarchical key figures.
Limitations:

ADAPT01641370

Description:
Multiple concurrent users view dashboard off Oracle JDBC, we would found high percentage of NullPointerException while trying to invoke the method org.eclipse.emf.common.util.BasicEMap$Entry.getHash()
New Behavior:
Multiple concurrent users view dashboard off Oracle JDBC, both GetLOV and RunQuery run successfully.
Limitations:

ADAPT01641666

Description:
Enabling email notification for successful or failed jobs and scheduling CR and Webi report does not show warning message to fill "From:" and "To:" email fields for "Set the values to be used here:" selection
New Behavior:
Proper warning message shown to fill "From:" and "To:" fields, if email notification is enabled with "Set the values to be used here:" selection on CR and Webi reports scheduling
Limitations:

ADAPT01641669

Description:
Instance detail popup screen for replication job is shown as blank and not showing detail
New Behavior:
Instance detail popup screen for replication job showing all the neccessary details
Limitations:

ADAPT01642354

Description:

Refreshing a webi report with a SAP Date Prompting variable is not reliable

New Behavior:

Refresh works and no longer hangs after several executions

Limitations:

ADAPT01642388

Description:

Introduced a configurable flag in crystal reports property file, which fixed issue that Prompt selection window while scheduling Crystal report based on BEx qry is coming with technical BEx variable names instead of text names

New Behavior:

go to C:\Program Files (x86)\SAP BusinessObjects\Tomcat6\webapps\BOE\WEB-INF\config\default, find CrystalReports.properties file. Within the file, set page.boe.prompt.page.show.prompt.text=true. Then restart tomcat. Now prompt text will be shown next to the parameter name like so, <parameter name> - <prompt text>.

Limitations:

ADAPT01642447

Description:

On a UNIX platform, too many core files are created when opening a document based on a BEx query and containing obsolete objects.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01643019

Description:

The Introscope passport must be split before it can be passed to SAP HANA.

New Behavior:

The problem is resolved.

Limitations:

ADAPT01643241

Description:

Now we can bring back prompt values, but this will not be sufficient in this case.
The full solution would requires us to bring back the index (List of values) that we do not bring back on purpose to not impact badly too much the performances.

New Behavior:

Can now answer prompt without index. Index are not supported in this workflow

Limitations:

ADAPT01643403

Description:

In WebIntelligence client, Incorrect error message on incompatible values in prompt panel for SAP variable.

New Behavior:

The problem is resolved

Limitations:

ADAPT01643552

Description:

Reports that are run on system locales other than English using data time parameters were producing an error

New Behavior:

The issue is now fixed

Limitations:

ADAPT01643649

Description:

TDC feature doesn't work properly

New Behavior:

This problem is resolved

Limitations:

ADAPT01643805

Description:

When a report is created with a BW connection and saved on to BOE with the report data and while trying to open the report from BOE in Crystal Reports for Enterprise it tries to connect to BW to load the report.

New Behavior:

While opening the report from BOE Crystal Reports for Enterprise won't try to open the BW connection when the report has saved data.

Limitations:

ADAPT01643912

Description:

Support of fact tables with no dimension table with Data Federator NWBI connector.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01643968

Description:

Product Version in CMC is showing 14.0.3 which is previous release information

New Behavior:

Product Version in CMC is showing 14.0.4

Limitations:

ADAPT01644022

Description:

In Analysis, edition for OLAP, when you try to connect to an SAP BW data source with single sign-on configured, the authentication process may fail. In this case, the following message may appear:
"JCO_ERROR_LOGON_FAILURE: System received an expired SSO ticket".

New Behavior:

This problem is resolved.

Limitations:

ADAPT01644175

Description:

While refreshing a Web Intelligence document based on a BEx query, the following message appears:
java.lang.NullPointerException: while trying to invoke the method
com.sap.ip.bi.base.application.service.rfcproxy.IRfcFunction.getImportingParameters() of an object loaded from local variable 'function'

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01644195

Description:

An error appears when you try to update deleted LDAP-mapped user groups.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01644323

Description:

Hierarchical Prompts for documents with BW as data source throws runtime exceptions

New Behavior:

Issue is fixed

Limitations:

ADAPT01644441

Description:

Reports that used SAP variables without preset values that did not have saved data would cause the CR for Enterprise designer to crash when trying to re-enter the query panel to modify the query.

New Behavior:

The issue is now fixed

Limitations:

ADAPT01644561

Description:

In WebIntelingence client on unix platform, user get an Error when trying to create a document with hierarchy object.

New Behavior:

The problem is resolved

Limitations:

ADAPT01644610

Description:

In Ipoint, before this patch we were not able to create new WebI Document.

New Behavior:

Now create document works fine.

Limitations:

ADAPT01644631

Description:

In information design tool (IDT), user faces some errors when creating OLAP queries inside non-cube specific OLAP connections.
In IDT and SAP BusinessObjects products consuming OLAP UNX universes, business queries on universes based on non-cube specific OLAP connections fails with some errors.

New Behavior:

The problem is resolved for business queries done on universes based on non-cube specific OLAP connections created in information design tool.

Limitations:

The problem is not resolved for OLAP queries done inside non-cube specific OLAP connections created in information design tool.

ADAPT01644801

Description:

Accessing local connections using UDT SDK while the application is in offline mode used to return in error

New Behavior:

The issue is resolved now and the user will be able to access local connections when the application is in offline mode.

Limitations:

ADAPT01644844

Description:

In the information design tool, after converting a .unv universe, tables with multiple primary keys display only one primary key in the data foundation table.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01644850

Description:

In the information design tool, when converting a .unv universe, if multiple objects are linked to the same list of values, duplicate lists of values with the same name are created in the business layer.

New Behavior:

This problem is resolved. The list of values is created once and linked to each object in the business layer.

Limitations:

ADAPT01644873

Description:

An merge between different .unx sources is occurring on the key instead of on the caption.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01644914

Description:

Member selector is invoked from prompt dialog much faster than before.

New Behavior:

After changing the max member selector size for the APS to 1000 in CMC, the member selector in the prompt dialog is invoked after only a minute or so.

Limitations:

ADAPT01645557

Description:

In BI LaunchPad, the description of the parameter value entered is blank.

New Behavior:

The issue is resolved.

Limitations:

ADAPT01645639

Description:

Web Intelligence freezes when a user opens an existing Web Intelligence document in Reading mode and then clicks "Design" to change to Design mode.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01645655

Description:

In WebIntelligence query panel, user cannot see list of value in Member Selector although bex query contains variable with default values already set.

New Behavior:

The problem is resolved

Limitations:

ADAPT01645659

Description:

On a UNIX platform, a memory dump occurs when a Web Intelligence document using a BEx query with a removed object is opened.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01645662

Description:

Persistent #TOREFRESH after a Refresh operation.

New Behavior:

The problem is resolved.

Limitations:

ADAPT01645726

Description:

In a Web Intelligence report with dhtml client, the date format in Input Control automatically changes from user's preferred locale format (such as dd/mm/yyyy) to mm/dd/yyyy.

New Behavior:

This problem is resolved

Limitations:

ADAPT01645890

Description:

Hierarchical node default selections for variable are not supported by DSL.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01646054

Description:

The CMS cannot match a user group when committing an update because the case of the source and destination user group names is different on the the source and destination deployments. Thus, either the user or the user group is renamed.

New Behavior:

The problem is resolved.

Limitations:

ADAPT01646058

Description:

The Upgrade management tool (UMT) fails to match up the same user group when committing an update because the casing is different between the source and destination user group names during a migration. The result is that either the user or the user group gets renamed.

New Behavior:

The problem is resolved.

Limitations:

ADAPT01646933

Description:
Set filters does not work when publish web intelligence block as web service...If you using all the objects as filter, the filter can be shown in web service.

New Behavior:

This problem is resolved

Limitations:

ADAPT01647166

Description:
Turning on variable dependency for Crystal Reports for Enterprise may cause the LOVs in a BEx query to return no data even if there is a range variable in the query.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01647375

Description:
In Web Intelligence, before this patch we had issue with format of type date.

New Behavior:

Date is now managed correctly

Limitations:

ADAPT01647580

Description:
When dashboard contains List view, it will causes components could not be shown on canvas.

New Behavior:

All the components could be shown.

Limitations:

ADAPT01647614

Description:
Dashboards may crash or perform poorly when opening an XLF file created in Dashboards 4.0 SP2.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01647677

Description:
In information design tool, it is not possible to display the keys when previewing the list of values for a dimension in an OLAP universe.

New Behavior:

The problem is resolved.

Limitations:

ADAPT01647690

Description:

In a Web Intelligence document, when selecting a list of values with the "Search in Keys" option (for a dimension or a hierarchy), the results display only the key instead of the caption and key.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01647742

Description:

When a Web Intelligence report is created based on a BICS connection that contains dimensions that point to the same master table in the Business Warehouse, the detail(attribute) objects display the same data.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01647976

Description:

In a Web Intelligence document, when "Public Folders" is selected during the Save action (Menu item "Publish to"), the Save button is not disabled, and when a user clicks Save, the following error message appears:
Could not save the document to the repository for the following reason: {com_msg} (WIS 30567)

New Behavior:

This problem is resolved.

Limitations:

ADAPT01647999

Description:

In the Web interface, the results of a search do not appear until you click the column header.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01648473

Description:

Version update of BusinessObjects_PlatformSearchUniverseContentExtractor_dfo.xml DFO file to XI 4.0 SP04 Patch1(4.0.4.1).

New Behavior:

Fix is realted to version update of BusinessObjects_PlatformSearchUniverseContentExtractor_dfo.xml DFO file hence There is no impact on the exisitng functionality.

Limitations:
None

ADAPT01648647

Description:

When publication source documents are all deleted from the system, upgrade management tool will exclude publication and its instances from migration.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01648996

Description:

Key figure structure with heterogeneous datatypes return Empty cells

New Behavior:

Key figure structure with heterogeneous datatypes return datas as string.

Limitations:

ADAPT01649177

Description:

one dashboard have 5 connection to webi report which published as web service , from observation ,everytime around 30 connection is created in webi processing server side and connection is not closed.

New Behavior:

This problem is resolved

Limitations:

ADAPT01649243

Description:

Error in WebIntelligence when loading numeric prompt after user change value

New Behavior:

The problem is resolved

Limitations:

ADAPT01649321

Description:

the number of connections to hana is better managed

New Behavior:

The response time for the utilisation of the EViews is improved

Limitations:

ADAPT01649488

Description:

It takes a long time for a Web Intelligence document to open.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01649492

Description:

Opening a WebI document takes too long, Optimize InitDrillEngine

New Behavior:

This problem is resolved

Limitations:

ADAPT01649548

Description:

In WebIntelligence client, for some bex query datasource, LOV is still empty after a "Refresh LOV" action in "Prompt" panel

New Behavior:

The problem is resolved

Limitations:

Fixed Issues for SAP BusinessObjects Business Intelligence Suite 4.0 Support Package 4 Patch 2

ADAPT01329705

Description:

When using the opendoc function to call a Crystal Report based off a BusinessObjects Enterprise XI Release 3.0 datasource, the output is in Crystal Reports format when users have exported the report to PDF or Excel format.

The cause of the problem is that the SAP viewer fails to correctly the export format.

New Behavior:

This problem is resolved.

To enable the fix, users must do the following configurations:

1) Undeploy the web application "SAP" from the Web Application Server.
2) Rename and backup the SAP.jar located in the following directory: <BOE_DIR>
\BusinessObjects Enterprise 12.0\warfiles\WebApps\SAP\WEBINF\lib
    Replace <BOE_DIR> with the name of the directory for BusinessObjects Enterprise
3) Return SAP.jar to the same directory you removed it from: <BOE_DIR>
\BusinessObjects Enterprise 12.0\warfiles\WebApps\SAP\WEBINF\lib
4) Manually rebuild SAP.war using the following path: <BOE_DIR>\BusinessObjects
Enterprise 12.0\warfiles\WebApps\SAP\
5) Redeploy SAP.war to the Web Application Server.
6) Restart the Web Application server.

Limitations:

ADAPT01563114

Description:

@prompt defined in IDT could not work correctly at runtime

New Behavior:

@prompt defined in IDT could work correctly at runtime

Limitations:

ADAPT01565289

Description:

When security is applied on Query as a Web Service (QaaWS) objects, users who refresh Xcelsius may receive an error message.

In this configuration, each time a user refreshes Xcelsius, the user's credentials are sent to the Central Management Console (CMS) for authentication. The problem is that user credentials are being mixed up, resulting in credentials for one user being sent for another user.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01602997

Description:

The Surface chart is invalid for 1 value.
For 1 value, the score become -9000 (whatever the number of Measure is)

New Behavior:

The Surface chart is invalid for 1 value.
For 1 value, the score become -9000 (whatever the number of Measure is)

Limitations:

The Surface chart is invalid for 1 value.

ADAPT01610939

Description:

WebI shifts cell value when Null on UNX OLAP (MSAS or ESSBASE). (Empty cell or empty column).

New Behavior:

Null values are correctly displayed in the WebI report.

Limitations:

ADAPT01615558

Description:

In the Central Management Console (CMC), users are unable to save Crystal Reports 2011 printer options in the Default Settings dialog box.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01615988

Description:

Universe having overloads were not listed as dependant objects in Upgrade Manager Tool.

New Behavior:

The issue is resolved and the overloads are listed

Limitations:

ADAPT01616388

Description:

The upgrade management tool does not migrate the access restrictions set on a universe in BIAR-to-Live mode when you use a BIAR file from a 4.0 deployment.

New Behavior:

The problem no longer occurs.

Limitations:

ADAPT01619642

Description:

Not able to test a new created web service in Web Intelligence Rich Client and import the WSDL in Dashboard Design.

New Behavior:

This problem is resolved.

Limitations:
No limitations.

ADAPT01625561

Description:

You cannot execute a query on a .unx universe that contains a cascading prompt.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01626991

Description:

Modify the mechanism by which LDAP subordinate referral handling is enabled. A reg key can turn on the flag by which we alter the queries when dealing with subordinate referrals

New Behavior:

The patch solves the issue

Limitations:

ADAPT01628113

Description:

In Web Intelligence, for OLAP .unx universes, some date objects when used in a query or in the calendar picker either return no data, incorrect data, or an error.

The problem arises when, in the information design tool, the data type of a date object in the OLAP business layer is changed from String to Date or DateTime. The Date and DateTime data types are not supported in OLAP .unx business layers.

New Behavior:

In the information design tool, the server object data types are read-only and cannot be changed in the business layer.

Limitations:

ADAPT01628331

Description:
Dynamic Prompts are not working : It's adding the double quotation mark.

New Behavior:

The problem is solved.

Limitations:
Numeric prompts based on List of values returning string datas are no more supported in BI4.x
To get the same behavior as in XI3.x, the solution is to replace the type set in the prompt from 'N' to 'K' (see an example below) :
Here is the previous syntax :
@Prompt('Prompt information','N','FY',MONO,CONSTRAINED).
The new syntax is :
@Prompt("Prompt information','K','FY',MONO,CONSTRAINED)"

This update has to be done, MANUALLY,
* on all concerned tables in the Data Foundation
* and/or on all concerned objects in the Business Layer

Updating tables and/or objects can be achieved thru the option 'Find/Replace' :
1) Open the Data Foundation or the Businness Layer,
2) Select, thru the Menu, the option Edit, and Find/Replace

ADAPT01628502

Description:
LCM Destination system shows dashes after loin to des on promotion window
New Behavior:

LCM Destination system should not show dashes on promotion window
Limitations:

ADAPT01631201

Description:
When reporting off a BEx query in Crystal Reports 2008 with a Fiscal Year variable in the format MM/YYYY, the following database connection error is displayed:
 'BAPI Error #:0 Invalid MDX command with /'
New Behavior:

This problem is resolved.
Limitations:

ADAPT01632941

Description:

When scheduling Web Intelligence documents and selecting the file extension, the period (.) between the file name and the file extension is not available and must be entered manually.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01634531

Description:

Class level object restrictions defined in the universe design tool are not propagated in BI launch pad. When running a query in Web Intelligence that accesses restricted objects, an error message is returned.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01634593

Description:

Labels values of a Pie chart are not displayed when a chart size is too small compared to Web Intelligence XIR3 3.1

New Behavior:

This issue is resolved.
In Web Intelligence, a new option Text Policy in "Data values" area of the Format chart dialog box has to be set.

Limitations:

ADAPT01635089

Description:

the source and target objects are correctly shown so we can map when the data source has been updated

New Behavior:

The source and target objects are shown correctly mapped when possible with an exception for key figures.
At this stage, key figures are removed from the query.
Note also that key figures' names may be replaced by their ID.
User must explicitly drag and drop the key figures when query panel is displayed after the mapping is done.

Limitations:

ADAPT01635136

Description:

A custom alternate color used in a Web Intelligence report is not kept when the document is saved as an Excel file.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01635851

Description:

Hierarchy feature is not working on mobile server

New Behavior:

Issue is fixed

Limitations:

ADAPT01637184

Description:

When you add sections to a WebIntelligence report based on SAPBW universe and do a refresh, all data are lost. Moreover, if you try to format the report, the WebIntelligence ProcessingServer crashes and an exception is raised.

New Behavior:

The problem is resolved.

Limitations:

ADAPT01637337

Description:

Improved performances in MSU Query optimisation

New Behavior:

Time to optimise a Query with 1000 columns has been improoved.

Limitations:
This fix applies to particular query patterns.

ADAPT01637413

Description:

User can create custom calculation in A-OLAP with French locale.

New Behavior:

With language preferences set to French in Infoview, user can create custom calculation in A-OLAP without error.

Limitations:

ADAPT01637572

Description:

Explorer to use result set cache of HANA

New Behavior:

For customers being on HANA Rev30 which do not require the "Temp table + multi-resultset", the "SQL order" would be a complete solution although this is not only implemented from Explorer side

Limitations:

ADAPT01637725

Description:

Users attempting to log into BI Launchpad using IE web browser and SAML authentication would sometimes get an empty page after being authenticated.

New Behavior:

This issue is resolved.

Limitations:

ADAPT01638002

Description:

Scheduling a publication in a Web Intelligence document with "Refresh on open" activated results in the report returned empty of data. Turning off "Refresh on open" results in the expected data appearing in the report.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01639393

Description:

When using the wdeploy tool in split mode, launching the Web Intelligence application from BI Launch Pad fails and generates the following error, class com.sap.webi.ui.jrp.WebIAppl. This is caused by an incorrect base URI in the Analytical Reporting application.

New Behavior:

Analytical Reporting references the correct base URI and Web Intelligence can be successfully launched from BI Launch Pad when using wdeploy in split mode.

Limitations:

ADAPT01639620

Description:

Colour Format is not applied to numerical values

New Behavior:

Colour Format is applied to numerical values

Limitations:

ADAPT01640086

Description:

Webi LOV fails on custom dimension.

New Behavior:

custom dimension's Lov is correctly displayed in WebI.

Limitations:

ADAPT01640936

Description:

In Life Cycle Management , non-Administrator users are not prompted to login to source and destination , and hence not able to create a job.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01640949

Description:

Percentage formatting in Web Intelligence Pie Chart is showing the value in parenthesis implying it's a negative value when it is not

New Behavior:

This issue is resolved.
In Web Intelligence Format chart dialog box in the Data values area, new options are available: "Separator Start Symbol" and "Separator End Symbol". Need to remove parenthesis on both options.

Limitations:

ADAPT01641189

Description:

Percentage value decimal place can be changed in Excel without corrupting data.

New Behavior:

Calculations with percent formatting in A-OLAP can be exported to Excel and have the percentage decimal place modified correctly.

Limitations:

ADAPT01641314

Description:

The substitution of the variable BOUSER in the ConnectInit parameter was not performed in the case of a MSU data foundation

New Behavior:

This problem is resolved

Limitations:

ADAPT01642399

Description:

Fixes the image corruption issue when saving a report with image

New Behavior:

Images in a report will not be corrupted when resaving the report. Also, Crystal Report for Enterprise does not crash when opening a report with corrupted image.

Limitations:

ADAPT01643096

Description:

Installing the Data Services or Information Steward products on the same machine as a BOE product results in the Data Services or Information Steward install crashing and failing to install.

New Behavior:

The problem is resolved. As long as a machine with BOE has Patch 2 for Support Package 4 installed before adding the Data Services / Information Steward products, their installers will run without crashing.

Limitations:

ADAPT01643784

Description:

No data is returned after a user refreshed a Web Intelligence report (based on a BEx Query) that contains multiple tables within a section.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01643837

Description:

Installing an update or patch does not properly update the Adaptive Processing Server and WACS server command line arguments and properties added in the update.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01643839

Description:

In certain cases, the APS or WACS server fails to start when its command line contains a nonexistent placeholder.

New Behavior:

This problem is resolved. Nonexistent placeholders are removed from the server's command line.

Limitations:

If the command line already contains nonexistent placeholders, applying the patch does not correct it.

ADAPT01643954

Description:

When adding a report filter, Is Not Null is not available.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01644088

New Behavior:

CRW could recognized the ras server which name has been changed

Limitations:

ADAPT01644170

Description:

Get a WebI Error on Essbase UNX " PbSerial::Exception" when trying to to load in the WebI query panel an UNX universe with a great object depth.

New Behavior:

Universes can be loaded in the WebI query panel.

Limitations:

ADAPT01644179

Description:

LCM ADD buttton not working in Add Object Page on reverse proxy server

New Behavior:

LCM Add button works fine in Add Object Page on reverse proxy server

Limitations:

ADAPT01644195

Description:

An error appears when you try to update deleted LDAP-mapped user groups.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01644359

Description:

In the Rich Internet Application and the Web interface, reports which contain multiple breaks (5 to 6) and use the Outline option (to fold and unfold), are sluggish, and in various instances WIH 444444 error appears.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01644617

Description:

Crystal Reports for Enterprise and BOE DHTML Viewer can not display the updated default value in a variable of a BEx Query. They still display the old default value.

New Behavior:

The above problem is resolved in Crystal Reports for Enterprise.
The problem in BOE DHTML Viewer will be addressed in 3.8.

Limitations:

ADAPT01644760

Description:

When these fields (document properties) are used in a report:
CurrentCEUserID, CurrentCEUserName, CurrentCEUserTimeZone,
a user who views the report in BOE should see the correct values of these fields. The problem was that when several users were viewing the report concurrently some of them were seeing the values corresponding to other users (e.g. a different user name than their own)

New Behavior:

The issue is fixed

Limitations:

ADAPT01644840

Description:
Selecting an Analysis View as a data source to create a Web Intelligence document returns an error.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01644869

Description:
Element links in a Web Intelligence document do not work in Reading mode.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01644880

ADAPT01645394

Description:
Opening in Excel or Excel 2007 via a Blackberry telephone a document saved in Web Intelligence that holds more than ten rows results in the display of only ten rows.
New Behavior:
The problem has been resolved.
Limitations:

ADAPT01645433

Description:
In Web Intelligence documents, users could not "Shrink to Fit" font formatting. This option is now configurable in the media property file, an .xml file configurable by the BI administrator. The parameters defined in this file apply to all reports (defined in any client as well as scheduled reports). By default, the "Shrink to Fit" option is deactivated.
New Behavior:
To activate the file:

1. Go the media property file in the following location:
INSTALL_DIR/ SAP BusinessObjects Enterprise XI 4.0/win32_x86/config/bobjserver/ caching_media_profiles.xml
The parameters for Export to Excel are the following:
  <PROPERTY NAME="output.format.xls.shrinktextactivated">no</PROPERTY>
  <!-- you can edit output.format.xls.shrinktextactivated -->
The default value of the "Shrink to Fit" parameter is set to "no".

2. Set, the parameter has to be set to "yes".
This parameter is configurable with the following profiles:
- Excel, ExcelFormatted, ExcelOptimized, ExcelDataCentric for .xls files
- ExcelXFormatted and ExcelXDataCentric for Excel 2007 files

3. Restart the Web Intelligence server.
Limitations:

ADAPT01645448

Description:
Parametrized queries to MS SQL Server 2012 through ODBC fail to execute.
New Behavior:
This problem is resolved.
Limitations:

ADAPT01645450

Description:
Connections to MS SQL Server 2012 through OLE DB fail if MS SQL Server Native Client 11 is used.
New Behavior:
This problem is resolved.
Limitations:

ADAPT01645561

Description:
Text misaligned when exporting to MS Excel format a report that dynamically position the object on the report.
New Behavior:

The problem is resolved.

Limitations:

ADAPT01646038

Description:

Currency symbol is not displayed when we have a cell with a negative value on Analysis edition for OLAP workspace.

New Behavior:

Cell values now show the currency symbol as well as the minus sign

Limitations:

ADAPT01646302

Description:

When generating the structure for a BEx query in the Query Panel, hierarchy variables and the default keydate are ignored.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01646564

Description:

Quarter information is missing in the SAP HANA PRM file, which prevents from using the Quarter function.

New Behavior:

This problem is resolved. The Quarter function definition has been added to the newdb.prm file for the SAP HANA database.

Limitations:

ADAPT01646585

Description:

In the Web interface, variable properties cannot be modified.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01646705

Description:

The chart in MHTML document is not displaying in IE8 while scheduling pulication to MHTML format

New Behavior:

This problem is resolved

Limitations:

ADAPT01646711

Description:

In the Rich Internet Application, in Web Intelligence reports, add one header row above the existing header of a vertical table and enter some text into the new header row. When you insert a new column beside the new header, it is placed in the wrong position.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01646713

Description:

Web intelligence document data can be exported to CSV format in View mode.

New Behavior:

Web intelligence document data can be exported to CSV format in View mode.

Limitations:

ADAPT01646729

Description:

IN CTS+ ,Preselecting request is adding continously the LCM content to request until we release it manually

New Behavior:

After this fix ,if user is selected Preselect request while exporting the LCM content to attach request it will always allows the only one time

Limitations:

ADAPT01646953

Description:

Users are unable to print Crystal reports to PDF in BI launch pad.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01646976

Description:

When using the SAP ERP or CSVOpen driver, if a condition of an SQL query contains any character which is reserved for regular expressions, the query fails with an error.

Example: SELECT * FROM table WHERE col1 LIKE "a^b$c"

New Behavior:

This problem is resolved. Characters which are reserved in regular expressions are now escaped in the query engine, before matching the condition. Reserved characters are the opening square bracket [, the backslash \, the caret ^, the dollar sign $, the period or dot ., the vertical bar or pipe symbol |, the question mark ?, the asterisk or star *, the plus sign +, the opening round bracket (and the closing round bracket).

Limitations:

ADAPT01646980

Description:

When using the SAP ERP or CSVOpen driver, single quotes that escape single quotes in string values of SQL queries are not omitted according to SQL standard.

New Behavior:

This problem is resolved. The grammar of the SQL Parser has been updated according to SQL standard, which uses a second single quote to escape a single quote in a string. For example, the following SQL query must be sent to match the value "val'ue": SELECT * FROM table where col='val''ue'.

Limitations:

ADAPT01646984

Description:

In Web Intelligence reports based on Microsoft Analysis Services universes, Lists of Values (LOV) are displayed as EMPTY_VALUES for certain dimensions.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01647040

Description:

Replication jobs fail on a Business Intelligence platform deployment where the source Central Management System uses HANA as the repository database. An error about initializing the CrystalEnterprise.Connection plugin (FWM 02018) is displayed.

This problem occurs when results from different sessions are mixed together due to a missing constraint in the relationship algorithm.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01647272

Description:

The Filter objects would not work and get incorrect data.

New Behavior:

This problem is resolved

Limitations:

ADAPT01647744

Description:

After opening a Web Intelligence document based on an analysis view, a message appears.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01647802

Description:

The Web Intelligence Rich Client trace file(.glf) is created on user the Desktop folder when Web Intelligence Rich Client is launched from BI Launch Pad

New Behavior:

This problem is resolved.

Limitations:

ADAPT01648005

Description:

In WebIntellingence application, search on key is not enable in dimension's object LOV panel of bex query (LOV is delegated search)

New Behavior:

The problem is resolved

Limitations:

ADAPT01648104

Description:

If you select the check box at the root of the "User and User Groups" logical group on the "Object Selection" page of the upgrade management tool, no user groups are migrated.

New Behavior:

The problem is resolved.

Limitations:

ADAPT01648299

Description:

Query Panel fetches too many information from BW backend.

New Behavior:

With this fix, the Query Panel fetches the BEx query description only when required. It does it when the query panel is open. Another limited fetch will also occur when data are previewed but only once.
The benefit of this fix is to significantly cut delays when working with this panel and reduce workload on BW server.

Limitations:

ADAPT01649394

Description:

The upgrade management tool does not migrate top-level user security for user groups during an incremental upgrade.

New Behavior:

The problem is resolved.

Limitations:

ADAPT01649569

Description:

When using the SAP ERP or CSVOpen driver, if an ORDER BY clause of an SQL query references a column several times, the driver throws an error.

New Behavior:

This problem is resolved. An ORDER BY clause can reference one column several times. For example: SELECT col1 FROM table ORDER BY col1, col1.

Limitations:

ADAPT01649580

Description:

We found that, in some cases, queries could be sent twice (one for the chart and one for the legend) when one should have been enougth

New Behavior:

This problem is resolved

Limitations:

ADAPT01649936

Description:

In WebIntelligence query panel, on the creation of query filter using bex query as datasource for dimension object, the LOV option search in key is not activate by default. Moreover, after retrieving values, the button "show/hide keys" is still grayed

New Behavior:

The problem is resolved

Limitations:

ADAPT01650557

Description:

The performance of showing the prompt value from list of value is very slow if there are lots of values in the list.

New Behavior:

The problem is resolved.

Limitations:

ADAPT01650780

Description:

Upgrade Management Tool cannot migrate failed instances.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01650806

Description:

There is a performance degredation when migrating named license user accounts to a BI 4.0 system via Upgrade Management Tool.

New Behavior:

The problem is resolved

Limitations:

ADAPT01650922

Description:

Prompted variables are not updated when the BEx query used in the query panel is modified

New Behavior:

After changing the Bex Query then refreshing, the user is prompted with the variables that do correspond to the new Bex Query and not the previous one.

Limitations:

ADAPT01650926

Description:

Refreshing a Web Intelligence document based on a BEx query returns an error message.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01651005

Description:

Data manager in Webintelligence Java Query Panel does not show any GroupinSets

New Behavior:

The problem is resolved

Limitations:

ADAPT01651072

Description:

"The execution of the specified analysis query failed. -Cannot get topology type of data provider before query execution plan generation"
The error message is displayed in case of an invalid connection.

New Behavior:

The issue has been resolved.

Limitations:

ADAPT01651109

Description:

In Web Intelligence, refreshing a list of values for an optional prompt in a BEx query returns an out of memory error.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01651229

Description:

Web Intelligence Rich Client Using Drag and drop object to a table report hearder will cause inserted column not to be properly placed

New Behavior:

This issue is resolved

Limitations:

ADAPT01651852

Description:

fixed the slow performance issue when viewing and refreshing the report on BOE

New Behavior:

The viewing performance becomes normal, instead of even slower than Support Pack 02

Limitations:

ADAPT01651885

Description:

Missing table with Refresh strcuture

New Behavior:

Refresh structure does not complain

Limitations:

ADAPT01651905

Description:

Windows AD authentication does not allow adding or removing groups because of invalid SI_MAPPED_GROUPS values inserted by the upgrade management tool.

New Behavior:

To clear the invalid values, click the Update button on the Windows AD authentication page.

Limitations:

ADAPT01651956

Description:

BI 4.0 does not support DeskI document. Upgrade Management Tool will exclude any DeskI objects for migration but its children objects are not exclude properly, therefore would generate error messages.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01652211

Description:

Multiple BW connections are not created when verifying prompting

New Behavior:

Issue is resolved

Limitations:

ADAPT01652306

Description:

BW variable with the option of optional and customer exit is not getting..custom exit value automatically while running opendoc link.....Current Type variable : optional with custom exit variable...

New Behavior:

This problem is resolved
Limitations:

ADAPT01652408

Description:
In BI 4.0 SP4, when you assign a default value to a webi prompt, you should be able at a later time to remove the default value so that when the query is run, "Selected Value(s)" is empty.

New Behavior:
The problem is resolved

Limitations:

ADAPT01652544

Description:
"The property with ID SI_LOCALE does not exist in the object" error pops up, when try to open Dashboards contains universe queries using OpenDocument URL

New Behavior:
The issue is resolved.

Limitations:
No.

ADAPT01653328

Description:
Bubble charts could not be viewed as Mobile Server was not sending Bubble chart related axis information.

New Behavior:
Hence forth Mobile Server will provide Bubble chart axis information.
Issue fixed.

Limitations:

ADAPT01653407

Description:
Correct yhe LOV of @prompt.

New Behavior:
The LOV of @prompt is correct.

Limitations:

ADAPT01653865

Description:
In the information design tool, when editing an existing OLAP connection in the repository, returns the message: "Error in creating connection".

New Behavior:
This problem is resolved.

Limitations:

ADAPT01653921

Description:
The upgrade management tool encounters various errors during migration since the introduction of the Atomic Security Commit in Feature Pack 3.

New Behavior:
The Atomic Security Commit is disabled during migration.

Limitations:
If Discussion Note objects fail to migrate the first time, they must be migrated again. In addition, hot backup cannot be performed during migration because it relies on the Atomic Security Commit.

ADAPT01655345

Description:

In a Web Intelligence report based on a BEx query, the values selected for an interval prompt are ignored.

New Behavior:

This problem is resolved.

Limitations:

Fixed Issues for SAP BusinessObjects Business Intelligence Suite 4.0 Support Package 4 Patch 3

ADAPT01524895

Description:

Drill Filter values are not cascaded on hierarchical objects when used in a Web Intelligence report.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01573257

Description:

When moving the mousing over a class folder object while designing a report in the Rich Client, the tooltip only shows the name of the class folder and does not show the class folder description.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01621074

Description:

In Web Intelligence based on BEx and UNX data sources, the "Set default values" option still displays a default value during a query refresh when unselected. It also remains selected when a default value is selected.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01624055

Description:

When a Dashboards model is closed, reopened, and refreshed several times in BI Launchpad, an "LO 26315" error message is displayed within 20 minutes.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01632230

Description:

Analysis for Office application using AD SSO does not work for OLAP connections.

New Behavior:

The issue is resolved

Limitations:

ADAPT01634110

Description:

LCM Webi WS changes CUID & Auth type should not change

New Behavior:

issue is resolved

Limitations:

ADAPT01634365

Description:

Refreshing a Web Intelligence report based on a .unx universe that contains an optional prompt and connects to an OLAP data source returns errors if no values are entered at the prompt.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01635688

Description:

Auditing databases do not display correct values for all event types associated with Web Intelligence documents

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01636377

Description:

In Linux, the adding of a filter to a migrated Web Intelligence report, thanks to the Filter bar, ends with an error.

New Behavior:

This problem is solved.

Limitations:

ADAPT01637226

Description:

In Analysis, edition for OLAP, when you connect to an SAP BW data source, date values in the analysis window are always displayed in the dd.mm.yyyy format.

New Behavior:

You can log onto the SAP BW server and use the SU01 transaction to set the preferred format for displaying dates in workspaces that are connected to that SAP BW server.

Analysis uses the same date format for displaying all date values and members in a workspace. If you connect to multiple SAP BW data sources with different date format settings, all dates are displayed using the format for the first SAP BW data source that you connected to. If you want to use the date format for a different SAP BW data source, you must create a new workspace and connect to that data source first.

Note: the date format that you specify in the SU01 transaction does not apply to the "Prompts" dialog box for an SAP BW data source with prompts. Values for date prompts in this dialog box are always formatted as yyyymmdd. See the fixed issue note for ADAPT01662017 for more information.

Limitations:

ADAPT01637887

Description:

Cell values are always displayed using the default formatting settings.

New Behavior:

Cell values are now formatted and displayed based on a users SU01 settings.

Limitations:

ADAPT01637971

Description:

LCM overrides was not updating Message server name and system ID fields

New Behavior:

LCM overrides is updating Message server name and system ID fields

Limitations:

Do not edit Server Type property in the edit window.If the user edits the server type property,the following changes will be seen:
1)In the destination, the connection properties page in CMC, can see the Group name property disapper.
2)New property name System number is added.
3)Message Server property label is changed to Server.
4)Server Type property is changed(takes some value in the drop down list)
5)for universe message server connections message server name in destination is not updating

ADAPT01641099

Description:
In the Web Intelligence Query Panel, when you have multiple queries with prompts that should be merged and one of them is mandatory, the resulting prompt is optional.

New Behavior:
The problem has been resolved.

Limitations:

ADAPT01641187

Description:
Selecting measures in the Measure Formatting dialog causes the scroll bar to jump to the end of the measures list, regardless of the position of the current measure selected.

New Behavior:
The scroll bar stays in line with the current measure selected rather than always jumping to the end.

Limitations:

ADAPT01641931

Description:
BI Launch Pad :Simple reports filters don't work in Web Intelligence document with BICS OLAP connection

New Behavior:
This problem is resolved

Limitations:

ADAPT01642249

Description:
Job promotion window does not list the events of type schedule.

New Behavior:
The issue is resolved

Limitations:

ADAPT01642540

Description:
When users attempt to login to BI Widgets where the Windows Regional Settings -> Format is set to English (India), the following error occurs: Cannot connect to the Host. login exception login exception (Error: WSE 99998). The argument has an invalid value en_IN

The cause of the problem is that the SAP BusinessObjects BI Platform host did not recognize the regional format English (India).

New Behavior:
This problem is resolved.

Limitations:

ADAPT01643287

Description:
Sort by date not working correctly in override scan window.

New Behavior:

Sort by date is now working correctly

Limitations:

ADAPT01643439

Description:

When you use Analysis, edition for OLAP to connect to an SAP BusinessObjects Planning and Consolidation data source, performance may be very slow in Analysis.
The cause of this problem is that duplicate Multidimensional Expression (MDX) queries are being sent to the SAP BusinessObjects Planning and Consolidation server.

New Behavior:

The duplicate queries are eliminated and performance is improved.

Limitations:

To benefit from the improved performance, administrators must carefully configure two parameters depending on workflow requirements of their typical end user.

To configure these properties, perform the following steps:

1. On the BI platform server, open the mdas_oda.properties file.

In a default Windows installation, the file is stored in the following directory: C:\Program Files (x86)\SAP BusinessObjects\SAP BusinessObjects Enterprise XI 4.0\java\pjs\services\MDAS\resources\com\businessobjects\multidimensional\services\
On Unix systems, the file is stored in the following directory: <INSTALLDIR>/sap_bobj/java/pjs/services/MDAS/resources/com/businessobjects/multidimensional/services/

2. Set values for the following properties:

XMLA_QUERY_CACHE_TTL: the number of queries that are cached per user session.
XMLA_QUERY_CACHE_LIFESPAN: the length of time, in milliseconds, before a cached query expires.

If the Planning and Consolidation system is frequently reprocessed and the priority of the typical end user is to view the most recent data at all times, both of these parameter values need to be decreased.
If the typical user is more concerned with performance, the parameters values need to be increased.

ADAPT01643457

Description:

In Web Intelligence reports, hierarchy columns cannot be hidden.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01645244

Description:

In BI 4.0, with SNC configuration, refreshing Web Intelligence reports against BW using a .UNV universe fails with the error "The operation could not be performed because the connection is closed. (IES 10901)".

New Behavior:

This problem is resolved.

Limitations:

ADAPT01645275

Description:

Error "The current query contains unresolvable objects" after repointing WebIntelligence report to another universe

New Behavior:

able to repoint WebIntelligence report to another universe without error
Limitations:

ADAPT01646187

Description:
In Life Cycle management, "Group" field in Connection Override property edit page is editable .
New Behavior:
issue is resolved
Limitations:

ADAPT01646769

Description:
A query containing range and hierarchy variable is displayed correctly on Crystal Report for Enterprise (Designer).
New Behavior:
A query containing range and hierarchy variable is displayed correctly on Crystal Report for Enterprise (Designer).
Limitations:

ADAPT01647616

Description:
Error FWM 01003 appears after doing the following:
1. A dashboard containing a universe query is saved to the BI platform on environment A.
2. In the Promotion Management Page (LCM) of the CMC, the XLF dashboard file and related UNX universe file are promoted to environment B.
3. The XLF file is opened (from Platform) in Dashboards in environment B and then Previewed or Exported to XLF, HTML, or PDF.
New Behavior:
This problem is resolved.
Limitations:

ADAPT01647732

Description:
Input controls in Web Intelligence reports show incorrect values and appear corrupt after an object is removed in the Query Panel.
New Behavior:
The problem has been resolved.
Limitations:

ADAPT01647894

Description:
Webi prompt cannot use the scientific notation '0e0', as it was not translated correctly by the Data Federation server.
New Behavior:
This problem is now solved.
Limitations:

ADAPT01648736

Description:
Filtering objects name in the WebIntelligence Available Objects pane does not work consistently when typing Japanese Characters through IME.
New Behavior:
The problem is resolved.
Limitations:

ADAPT01648916

Description:

When viewing Web Intelligence documents with the Web interface, background images and icons disappear from the report header.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01649339

Description:

JBOSS application server does not load the appropriate jars for vintella.

New Behavior:

This Issue is now resolved.

Limitations:

ADAPT01649577

Description:

In some cases unnecessary calls were made to the backend server.

New Behavior:

The issue is now resolved.

Limitations:

ADAPT01649583

Description:

Some queries send to hana weren't as optimised as the could be

New Behavior:

it is working as intended

Limitations:

ADAPT01650557

Description:

The performance of showing the prompt value from list of value is very slow if there are lots of values in the list.

New Behavior:

The problem is resolved.

Limitations:

ADAPT01651124

Description:

The LOV of hierarchical prompt should use the new selected values of the hierarchy node variable, not the default values.

New Behavior:

The LOV of hierarchical prompt should use the new selected values of the hierarchy node variable, not the default values.

Limitations:

ADAPT01651220

Description:

The AND, WHERE and OR operators have been translated to Japanese. They should be in English.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01651849

Description:

An error is produced when trying to create a new Web Intelligence Processing Server.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01652196

Description:

Crystal Reports for Enteprise Support Pack 04 List of Value drop downs takes a long time for the List of Values to display

New Behavior:

The performance issue is resolved

Limitations:

ADAPT01652206

Description:

When a report with a subreport pointing to a BW query with one of the dimensions removed is opened, the report throws an error without verifying the data source.

New Behavior:

The fix corrects this behavior and correctly displays the verify datasource dialog wherein the user is asked to map the missing dimension to a new dimension and subsequently the data is refreshed.

Limitations:
None

ADAPT01652258

Description:

After Installation of SAP Business Intelligence 4.0 full build completes ConnectionServer32 fails to start. The server stays in "initializing" state and it is disabled.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01652491

Description:

In order to support ZEN viewer integration in OpenDocument and BILaunchpad, the pages must have html5 doctype.

New Behavior:

An html5 doctype is set on the top level window in opendoc. In BILP, open actions which require HTML5 will open in a new window in IE with doctype html5.

Limitations:

ADAPT01652498

Description:

In order to support opendec with ZEN viewer on mobile, the ability for "view" actions to add meta tags to the top level window in opendec is needed.

New Behavior:

This functionality has been added.

Limitations:

ADAPT01652751

Description:

When the user attempts to perform Complete Upgrade using Upgrade Management Tool for the second time on system with 4.0 FP03 or later, there are a number of FRS errors that prevented the migration to complete.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01652814

Description:

Allow to use Web Intelligence prompts with numeric information using the scientific notation

New Behavior:

Scientific notation can be used in numeric prompts from Web Intelligence

Limitations:

ADAPT01652972

Description:

After you compact the display of nested hierarchies in Analysis, edition for OLAP, you may not be able to expand parent members of the combined hierarchy.
For more information on compacting nested hierarchies, refer to the Nesting hierarchies section of the SAP BusinessObjects Analysis, edition for OLAP User Guide available on the SAP Help Portal at http://help.sap.com.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01653248

Description:

Web Intelligence document through Web can't be saved in the sub category under Personal or Corporate Categories...Web Intelligence document through Rich Internet Application can be saved in the sub category under Personal or Corporate Categories.

New Behavior:

This problem is solved

Limitations:

ADAPT01653278

Description:

Default variable in BEx doesn't show in Viewer

New Behavior:

The issue is resolved

Limitations:

ADAPT01653290

Description:

After you compact the display of nested hierarchies in Analysis, edition for OLAP, you may not be able to expand parent members of the combined hierarchy.
For more information on compacting nested hierarchies, refer to the Nesting hierarchies section of the SAP BusinessObjects Analysis, edition for OLAP User Guide available on the SAP Help Portal at http://help.sap.com.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01653332

Description:

Performance issue in Dashboard 4.0 (with grids) while using QAAWS.

New Behavior:

This problem is resolved

Limitations:

ADAPT01653700

Description:

When creating a Web Intelligence publication with the format set to "mHTML," the output mHTML file is not UTF-8 encoded. Chinese and Japanese multibyte characters are garbled.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01653767

Description:

When checking the checkbox for the "Web Intelligence Core Service" the error "The argument has an invalid value setValue(): Invalid value or value out of valid range. " is displayed.

New Behavior:

This problem is solved

Limitations:

ADAPT01653861

Description:

LCM (promotion management) should only promote the access level selected by user, not additional ones.

New Behavior:

issue is resolved

Limitations:

ADAPT01653891

Description:

Erroneous session log-offs cause the ManagedLogoffException in other migration plugins. The message "com.crystaldecisions.enterprise.ocaframework.IManagedService$ManagedLogoffException: Unable to reconnect to the CMS <host>:<port>. The session has been logged off or has expired. (FWM 01002)" is displayed.

Description:

When attempting to view a dashboard on OpenDocument when AD SSO is enabled, the error "The property with ID SI_LOCALE does not exist in the object" appears.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01654332

Description:

UserResponse formula does not work in RefreshOnOpen WebI document

New Behavior:

Issue fixed

Limitations:

ADAPT01654369

Description:

CMS crashes with an error message "CMS database is overloaded" when CMS is left idling after a period of time.

New Behavior:

This issue is resolved.

Limitations:

ADAPT01654474

Description:

Queries containing InfoObjects with a large number of display attributes fail to execute.

New Behavior:

Queries execute successfully regardless of the number of display attributes.

Limitations:

ADAPT01654575

Description:

Solves the issue that a query that returns 0 tuple hangs in the Data Federation service.

New Behavior:

This probklem in now solved.

Limitations:

ADAPT01654626

Description:

If a formula in a Web Intelligence document does not explicitly contain the SUM aggregation function, the #UNAVAILABLE error appears.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01654648

Description:

Deletion of folder corrupts the UI in Add objects Page

New Behavior:

Deletion of Folder in ADD Object Page is working fine.

Limitations:

ADAPT01654805

Description:

There should no error dialog when refreshing data with "Delivery Time". Correct data should be retrieved.

New Behavior:

There should no error dialog when refreshing data with "Delivery Time". Correct data should be retrieved.

Limitations:

ADAPT01655249

Description:

In the connection properties, we enter the server name as "servename\instancename" and click on done and save it. When we edit the override again we see that the "\" should not removed

New Behavior:

The issue is resolved

Limitations:

ADAPT01655477

Description:

Order of prompts has been changed after adding objects to or deleting objects from the Result Objects pane of the Query Panel in Web mode.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01655539

Description:

Created a relationship between design studio and OLAP connection in the Cmc.

New Behavior:

Created a relationship between design studio and OLAP connection in the Cmc.

Limitations:

ADAPT01655716

Description:

When a user that is loggend in to LCM with a SAP user creates a request, the request should be created with the SAP user in CTS+ and not the service account for LCM.

New Behavior:

1)If CMC User having the appropriate rights in CTS+ and in BOE LCM web service setting with Other user then transport request is creating under BOE CMS User
2)If CMC User not having the appropriate rights in CTS+ and BOE LCM web service setting with Other user then no transport request is created but it still prompt for username and password

Limitations:

ADAPT01655832

Description:

Existing report crashes Designer and does not show image correctly

New Behavior:

Does not crash and show image correctly

Limitations:

ADAPT01656209

Description:

MobileOTA14.war is not getting updated with the patch installation

New Behavior:

Issue fixed

Limitations:

ADAPT01656223

Description:

Processing icon does not display before an export to excel or csv.

New Behavior:

Processing icon now appears before exporting to excel or csv.

Limitations:

ADAPT01656274

Description:

In Web Intelligence report, when you add a SUM calculation "in both directions" in a crosstab table containing breaks, an unwanted break footer is inserted.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01656310

Description:

If the objects used in the HANA variables had some special chartacters it wasn't working

New Behavior:

it is working as intended

Limitations:

ADAPT01656362

Description:

The upgrade management tool cannot process a property bag inside a schedulable object if it contains a heterogeneous collection of properties and property bags, displaying the following error: "A runtime exception has occurred in the Object Manager. java.lang.String cannot be cast to com.crystaldecisions.sdk.properties.IProperties".

New Behavior:

The problem is resolved.

Limitations:

ADAPT01656594

Description:

SAP BEx report with range variable with default value cannot be opened after saving

New Behavior:

SAP BEx report with range variable with default value can be opened after saving

Limitations:

ADAPT01657225

Description:

With a Database ranking filter, upon a query with delegated measure, the creation of the cross table ends with the disappearance of data.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01657935

Description:

When editing prompt values for a workspace with multiple analyses on the same sso connection, a fatal error occurs

New Behavior:

Prompt values can now be edited without any errors occurring.
Limitations:

ADAPT01657975

Description:

Dependency prompting was not functioning with multi-value SAP variable prompt.

New Behavior:

The problem was resolved.

Limitations:

ADAPT01658395

Description:

In the Web Intelligence Query Panel, in a BEx query, a Calculated Key Figure under a hierarchy structure is not visible.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01658700

Description:

In WebIntelligence report using BEx source, query containing a Dimension of data type Date and a Measure fails with error message "invalid data in column".

New Behavior:

Issue is fixed.

Limitations:

Fixed Issues for SAP BusinessObjects Business Intelligence Suite 4.0 Support Package 4 Patch 4

ADAPT01484513

Description:
When scheduling a document, the following error message may appear: "Sorry, you do not have the right to 'Edit objects' (ID:6) for [report name]".

This problem happens when the user has scheduling rights to the document, but not Edit Object rights.
New Behavior:
This problem is resolved.
Limitations:

ADAPT01514387

Description:
Fold Unfold Dhtml + Applet: When folding a section on date or number dimension with outline's arrow, no result
New Behavior:
This problem is resolved
Limitations:

ADAPT01628822

Description:
Web Intelligence 4.X: Sorting is incorrect for webintelligence report based on Bex query
New Behavior:
This problem is resolved
Limitations:

ADAPT01633297

Description:
The host(unix server) metrics in the monitoring application does not contain data
New Behavior:
The issue is resolved
Limitations:

ADAPT01634275

Description:
In BW queries, when you try to create a LiveOffice document, the following error message appears and the operation times out:
An error occurred from the prompt dialog. (LO 02031)

In Qaaws, when you try to create a LiveOffice document, the following error message appears and the operation times out:
 GetDocumentInformation exception (Error: WRE 99999)
New Behavior:
This problem is resolved.
Limitations:

ADAPT01634294

Description:
BI Services management fails when https is enabled.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01636012

Description:
When the table structure is changed in the SAP BW system due to SAP BW InfoObject modification, you cannot update the table structure in the existing Multisource-Enabled Data Foundation.
Even if you try to create a new Multisource-Enabled Data Foundation using the same SAP BW relational connection, it fails.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01639704

Description:
In the Web Intelligence Web interface, the Sum function is disabled for numeric dimension variables and formulas.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01639998

Description:
While scheduling a WebIntelligence document on BO 4.0 we run into the following error."Database error: Corba : Error on Execute. IES 10901.

New Behavior:

Problem is resolved

Limitations:

ADAPT01640898

Description:
Cascading List of LOV's report is popping with internal server error when viewed on the client for prompt on a "DateTime" field.

New Behavior:

Issue fixed

Limitations:

ADAPT01642064

Description:
In QaaWS designer, when specifying a filter object using a Prompt, users receive the error:"getDataSourceObjectLOV exception (Error: WRE 99998)"

New Behavior:

This problem is resolved

Limitations:

ADAPT01643538

Description:
When adding filter object to the Universe query (setting it to "list of values") in a Live Office document throws the following error message:....

New Behavior:

This problem is resolved

Limitations:

ADAPT01643989

Description:

In a Web Intelligence document in Reading mode, the "Prompts Summary" section in the Left Panel does not display the selected hierarchy node; instead the full hierarchy path appears.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01644005

Description:

The new patch fixes Business Objects Enterprise logon issue in Crystal Report for Enterprise for a specific proxy connectivity.

New Behavior:

The issue was resolved.

Limitations:

ADAPT01644370

Description:

In a Web Intelligence document imported from XI R2, the "Drill by" right-click contextual menu option does not appear in a column.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01644810

Description:

Content of wide Web Intelligence documents may appear as truncated in View mode.

New Behavior:

The problem is resolved.

Limitations:

ADAPT01646948

Description:

No audit trace event created when you export a Web Intelligence report to a different format.

New Behavior:

This problem is resolved. Exporting a report to a different format is correctly recorded in the audit file.

Limitations:

ADAPT01647455

Description:

Docuemnt is added from SAP User's Favourite folder to categeoty then in Promotion management add objects page Users and Favourite folder are coming as a primary objects

New Behavior:

we removed Users and fovourite folders from promary objects page added as dependent objects.

Limitations:

ADAPT01647708

Description:

Attributes with the same name in different dimensions are not correctly managed in Web Intelligence and return the same result set.

New Behavior:

The problem is resolved. These attributes are correctly retrieved and are now differentiated.

Limitations:

ADAPT01648643

Description:

cannot cancel query when refresh WebI document both in View mode and Modify mode in BI4.0 SP04

New Behavior:

Can cancel query when refresh WebI document both in View mode and Modify mode (DHTML mode)

Limitations:

ADAPT01648659

Description:

An error is displayed instead of LOV when LOV is custom sql with @prompt function in its definitin

New Behavior:

The problem is resolved

Limitations:

ADAPT01648703

Description:

In a Web Intelligence document, column widths are broader in Page mode compared to Quick View mode.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01649373

Description:

Takes 50 second to generate the 2nd tab for particular webi document on AIX only

New Behavior:

This problem is resolved

Limitations:

ADAPT01649597

Description:

OLE DB connections do not close properly after selecting "Disconnect after each transaction".

New Behavior:

The problem is resolved.

Limitations:

ADAPT01650240

Description:

BW backend statistics not being generated.

New Behavior:

Run an Analysis OLAP report that contains BEx Queries and search for new entries in tables RSDDSTAT_OLAP. Statistics data will be available by using SE16 transaction, and is stored in RSDDSTAT_OLAP table.

Limitations:

ADAPT01652408

Description:

In BI 4.0 SP4, when you assign a default value to a webi prompt, you should be able at a later time to remove the default value so that when the query is run, "Selected Value(s)" is empty.

New Behavior:

The problem is resolved

Limitations:

ADAPT01652410

Description:

In information design tool, the error occurs when the user edits a derived table and modify a column definition included in a join. Upon saving the data foundation, the file gets corrupted and cannot be opened any longer.

New Behavior:

This problem is resolved.

Limitations:
There are no known restrictions

ADAPT01652928

Description:

'Prompt with description' option in parameters gets unchecked automatically when editing data sources.

New Behavior:

'Prompt with description' does not get unchecked after editing data sources

Limitations:

ADAPT01653154

Description:

When one of the Hana connection was corrupted, other connections couldn't be listed anymore

New Behavior:

Issue has been resolved

Limitations:

ADAPT01653171

Description:

A Web Intelligence report based on a cross table returns wrong values for each dimension object and the measure values display #MULTIVALUE. The + sign when clicked does not display other values.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01653225

Description:

When refreshing a Web Intelligence report that contains optional prompts based on a .unx universe in the Web interface, the search box in the list of values is sometimes greyed out and unusable.

New Behavior:

The problem has been resolved.

Limitations:

ADAPT01653841

Description:

The web application included with Data Services could not be deployed to the JBoss 5 application server using the WDeploy tool.

New Behavior:

Deployment of the Data Services web application to JBoss 5 using WDeploy works correctly.
Limitations:
none

ADAPT01654612

Description:
There are performance issues in the Web Intelligence applications:
- In the Web Intelligence Rich Client, it takes several minutes to open a document, filter on a document, or navigate the tabs.
- In the Web Intelligence Web interface or Rich Internet Application, it takes almost a minute for the application to open or open a document, or use or remove filters in a document.

New Behavior:
This problem is resolved.

Limitations:

ADAPT01655491

Description:
An unexpected error "WIH 444444" occured when clicking sort or break in some cell of table in webi document.

New Behavior:
the issue is fixed

Limitations:

ADAPT01655909

Description:
Deployment files should upload successfully when the system is patched/updated
BusinessObjects_InformationDesigner_pin.xml is failing to upload on patch/update

Look in the Install log and you'll see this specific error message:
[InstallEntDfoWrapper.UploadDFO] UploadDFO Failed
C:\Program Files (x86)\SAP BusinessObjects\InstallData\logs

If the BusinessObjects_InformationDesigner_pin.xml PIN File is not uploaded, it should be visible in this folder:
C:\Program Files (x86)\SAP BusinessObjects\SAP BusinessObjects Enterprise XI 4.0\packages

New Behavior:
BusinessObjects_InformationDesigner_pin.xml well uploaded and it should NOT be visible in this folder:
C:\Program Files (x86)\SAP BusinessObjects\SAP BusinessObjects Enterprise XI 4.0\packages

Look in the Install log and you'll see that there is no specific error message concerning
BusinessObjects_InformationDesigner_pin.xml PIN File.

Limitations:

ADAPT01656019

Description:
Error occurs due to the display format created for certain business objects in information design tool. The resulting universe cannot be loaded in Web Intelligence.

New Behavior:
The problem is resolved. The patch makes it possible to read these display formats and load the universe appropriately in Web Intelligence without error.

Limitations:
There are no restrictions for this patch.

ADAPT01656155

Description:

The selection of topmost hierarchy level in the time hierarchy node from a Bex query in the prompt values of Web Intelligence report returns a "ABEND RS_EXCEPTION (000)" error instead of returning the proper data.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01656935

Description:

In WebIntelligence, the lov for a Dimension Filter could not be loaded when there is SAP variables mandatory in the Bex becauseWebIasksto answer the SAP variables but the user cannot select answers.

New Behavior:

The lov is now opened directly without prompting the SAP variable.

Limitations:

ADAPT01657730

Description:

When opening in Web Intelligence a List of Values in a prompt box, if you want to execute a delegated search, Web Intelligence should not request the List Of Values first.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01657843

Description:

BW variable of Keydate/calendar day with mandatory option is not displaying in webi prompt of DHTML view mode which is used by unv universe against BW query

New Behavior:

BW variable of Keydate/calendar day with mandatory option is displaying correctly in webi prompt of DHTML view mode which is used by unv universe against BW query

Limitations:

ADAPT01657901

Description:

Quotation marks (" ") are not available in the text qualifier list when scheduling a Web Intelligence report in CSV format in Business Intelligence (BI) platform 4.0.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01657927

Description:

Crystal Reports generates invalid SOQL for Salesforce.com

New Behavior:

This problem is resolved.

Limitations:

ADAPT01657944

Description:

No List of values for shared BEX variable when the shared Variable is replaced with another shared Variable

New Behavior:

The probleme has been resolved

Limitations:

ADAPT01658022

Description:
Web Intelligence reports are refreshed twice when called from WSDL and underlying reports have no prompts.
New Behavior:
This problem is resolved.
Limitations:

ADAPT01658229

Description:
LOV error with custom sql LOV in MSU pattern
New Behavior:
The probleme has been resolved
Limitations:

ADAPT01658232

Description:
The upgrade management tool migrates a user incorrectly if the user already exists on the destination system, and the user names on the source and destination systems use different letter cases.
New Behavior:
This problem is resolved.
Limitations:

ADAPT01658251

Description:
In Webintelligence DHTML edit mode, adding a break to a crosstab having breaks is adding an unwanted break footer separation line which cannot be deleted
New Behavior:
This problem is resolved
Limitations:

ADAPT01658330

Description:
When a webi report created on a derived universe(unv), is selected in LCM, its dependencies only include derived universe and connections. But not the kernel universe
New Behavior:
When a webi report created on derived universe(unv) is selected in LCM, its dependencies should also include the kernel universe.
Limitations:

ADAPT01659331

Description:
Using a Bex query with an optional Text variable, the businessLayer can be updated;In WebI Query Panel, opening the Set Variables window, this variable can be skipped.
New Behavior:
When the Text variable is skipped the resulting BusinessLayer contains now " &varname&" in the measure that use this variable. (where varname is the techname of the Text variable).
Limitations:

ADAPT01659371

Description:

WebI Report functions which contain a space willl not validate correctly and generate error in Italian language version: "Identificatore non valido 'formato' alla posizione '1'(IES 10022)"

New Behavior:

This problem is resolved

Limitations:

ADAPT01659390

Description:

In Web Intellignece, the BICS ResultSet chunking functionality was broken when a resultSet bigger than the chunk value was retrieved.

New Behavior:

The ResultSet chunking functinality returns correct data without error.

Limitations:

ADAPT01659853

Description:

Universes created using derived table on SAP HANA are missing double quotes around the column names if the column name starts with a number after migration / upgrade.

New Behavior:

The problem is resolved.

Limitations:

ADAPT01659937

Description:

Multivalue error in Webi Document after BO 4.0SP4 upgrade
Formulas containing variables do not display correct values. Instead the field displays "#MULTIVALUE".

New Behavior:

This problem is resolved

Limitations:

ADAPT01660515

Description:

When users go to "OLAP Connections" in CMC the page does not to render properly.

The cause of the prblem is that a previous fix forced IE to emulate the latest version of IE available
in order to support HTLM5 actions in the Design Studio Viewer.

New Behavior:

IE will emulate IE8 by default, but it will emulate the highest version if
actions require HTML5. The problem is resolved.

Limitations:

ADAPT01660535

Description:

Member unique names not added to the hierarchy member descriptions

New Behavior:

When using Analysis, edition for OLAP to create a workspace off Microsoft SQL Server Analysis Services, which contains two hierarchies from the same dimensions, member unique names are not added to the hierarchy member descriptions.

Limitations:

ADAPT01660913

Description:

User will be able to logon IOMS with trusted Authentication

New Behavior:

User will be able to logon IOMS with trusted Authentication & IOMS will support SharePoint Claims based Authentication

Following are steps should be followed for configurations

1.Install BOE SP04 & SP04 patch 4 on BOE

2.Create SharePoint site with NTLM claims authentication & user is able to access the SharePoint site

3.Install IOMS SP04 on SharePoint site created in in step 2

4.Install IOMS SP04 patch 4 on SharePoint machine

5.Enable BOE trusted authentication in CMC & generate shared secrate, refer BOE admin guide for configuring trusted authentication

6.Map Windows AD users to Enterprise user using CMC alias option

7.Copy the TrustedPrincipal.conf from BOE machine to SharePoint machine in C:\Program Files (x86)\SAP BusinessObjects\SAP BusinessObjects Enterprise XI 4.0\win64_x64 assuming IOMS is installed on default drive c:

8.Logon to IOMS with enterprise users, these users are mapped from AD users

9.Enable isTrusted to true in web.config under The InfoView app at C:\Program Files (x86)\SAP BusinessObjects \SAP BusinessObjects Enterprise XI 4.0\Web Content\SharepointApp\InfoViewApp

10.Logon to SharePoint 2010 with AD users

11.User should be able to logon Automatically to IOMS using SSO from Client Windows machine

Limitations:

ADAPT01662017

Description:

In Analysis, edition for OLAP, when you connect to an SAP BW data source with a date prompt that has a default value, the date format for the SAP BW server is applied to the default prompt value. However, Analysis only accepts date prompts that have the format yyyymmdd.

If the date format for the SAP BW server does not match the yyyymmdd format, you will not be able to specify valid dates for date prompts with default values.

New Behavior:

This problem is resolved. The "Prompts" dialog box formats default values for date prompts as yyyymmdd regardless of the date format setting for the SAP BW server.

The date format that you specified for the SAP BW server still applies to dates in the analysis window. See the fixed issue note for ADAPT01637226 for more information.

Limitations:

ADAPT01662307

Description:

Getting Timeout error messages for the Portal while opening the dashboard.

New Behavior:

There should be no error messages for BW portal when there is dashboard which is keeping refreshing BEX query.

Limitations:

Fixed Issues for SAP BusinessObjects Business Intelligence Suite 4.0 Support Package 4 Patch 5

ADAPT01602595

Description:
Web Intelligence Query Panel Filter pane is missing the "OR" operator when there is a multiple filter set.
New Behavior:
This problem is resolved.
Limitations:

ADAPT01606456

Description:
Cannot create new Information Space on a UNX universe based on Microsoft SQL Server 2008

New Behavior:
The issue has been fixed in full build SP4.
Limitations:
Workaround for SP4 patches (this is no longer necessary starting SP4 Patch 6 and SP5):
Edit Explorer Exploration Server command line parameters in CMC and replace
-Dbusinessobjects.connectivity.directory=
with
-connectivity_dir
Restart Exploration Server

ADAPT01627537

Description:
A Web Intelligence report with key date prompts, when scheduled, fails and the following error message appears:
Cannot build the query or generate the report. (WIS 30351)
New Behavior:
The problem has been resolved.
Limitations:

ADAPT01634588

Description:
The connections for native connectivities are not released when using "Disconnect after each transaction" mode.
New Behavior:
This problem is resolved.
Limitations:

ADAPT01635595

Description:
Navigation Path are duplicated in universe outline
New Behavior:
Navigation Path are correctly displayed
Limitations:

ADAPT01639276

Description:

Regardless of the size you set in WebIDefaultStyleSheet.css for the cell minimum height, the minimum size that can be reached in table cells is always 0.42cm.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01640938

Description:

Exception when opening migrated documents

New Behavior:

This problem has been resolved.

Limitations:

ADAPT01641915

Description:

Upgrade Management Tool throwing error message if we import universe from BIAR file

New Behavior:

The issue is Fixed.

Limitations:

ADAPT01649083

Description:

CR4E crashes with error message when 2nd hierarchy object from Bex query is inserted in the report.

New Behavior:

The above issue is resolved

Limitations:

ADAPT01650031

Description:

 Date prompt does not show calender

New Behavior:

 Date prompt does show calender

Limitations:

ADAPT01651798

Description:

Parameter has no values in some reports

New Behavior:

Parameters return values

Limitations:

ADAPT01652938

Description:

WebIntelligence Rich Internet Application fails to launch with Java Runtime Environment 7 installed on client side.

New Behavior:

The problem is resolved.

Limitations:

ADAPT01653959

Description:

The Prompt dialog box does not behave properly when the BI platform is embedded in NetWeaver.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01655711

Description:

Arrondi() function in French Webi gives error: "Invalid identifier 'Arrondi' at position 1. (IES 10022)" whenever it is used

New Behavior:

This problem is resolved

Limitations:

ADAPT01655727

Description:

Loading a large List of Values (LOV) in Analysis, edition for OLAP takes a long time.

New Behavior:

LOV performance has been improved by caching members to allow for smoother scrolling and also by reducing the number of calls made to the SAP BW server.

Limitations:

ADAPT01656164

Description:

After modifying the subquery values in a Web Intelligence query, when viewing the script, the error "Incompatible object types in the sub query. (WIS 00024)" is displayed.

New Behavior:

This problem has been resolved.

Limitations:

ADAPT01656726

Description:

Excel Data source changing the object type in Object properties in WebI Date type is not kept

New Behavior:

Excel Data source changing the object type in Object properties in WebI Date type is kept

Limitations:

ADAPT01657238

Description:

The length of a returned value for an ABAP function may be reported as equal to zero, which causes an error in Web Intelligence.

New Behavior:

The problem is resolved. The String Max Length parameter has been added to the jco.sbo file. See the Data Access Guide for more information.

Limitations:

ADAPT01657962

Description:

- When the report contains string/character prompts, the attached code works absolutely fine..- However, when passing values to date prompts using SDK, the instance fails with the attached error message..

New Behavior:

The problem is solved

Limitations:

ADAPT01658831

Description:

In some cases, hierarchy presented for a dimension may not be the correct one in Web Intelligence query panel for BICS.

New Behavior:

This problem has been resolved

Limitations:

ADAPT01659004

Description:

The logical operator "AND" between 2 filters has been translated in Japanese while the other operator "OR" is in english in the Java report panel Japanese interface. Logical operators "AND" / "OR" should not be localized.

New Behavior:

Logical operators "AND" / "OR" now both appear in English.

Limitations:
N/A.

ADAPT01659457

Description:

In explorer, they are 2 queries sent to HANA when opening the Information spaces, if the 1st one is slow the second will be send several second after, and in some cases the chart may have newer data than the facets (it can also be the case when changing the chart type, the query for the facet won't be send)

New Behavior:

we are now displaying the time of the query on both the chart and the facet and we added a global refresh button

Limitations:

ADAPT01660073

Description:

SAP Crystal Reports for Enterprise crashes if crosstab total label is replaced with a formula.

New Behavior:

The issue is no longer reproducible.

Limitations:

ADAPT01660221

Description:

A Webi report that is based off of a BICS connection to a BEx data source is scheduled to a "PDF" or "Webi" format. The expected behaviour is that all of information that is returned will be shown correctly and some of the fields don't show up as "#TOREFRESH".

New Behavior:

This problem is resolved

Limitations:

ADAPT01660466

Description:
Fixed type cast exception

New Behavior:

Can logon to web services

Limitations:

ADAPT01660704

Description:

The SQL query generated when using the "Profile Data" feature is not correctly parsed by SQL parser component of Connection Server, due to case sensitivity.

New Behavior:

The problem is resolved.

Limitations:

ADAPT01660733

Description:

when doing a local filter on a chart, the filter icon wasn't visible

New Behavior:

it is working as intended

Limitations:

ADAPT01661048

Description:

In BI 4.0 SP04,When creating Webi report on BEx, Element linking option should be enable with Hierarchical Objects

New Behavior:

This problem is resolved

Limitations:

ADAPT01661241

Description:

Web Intelligence may stop responding when validating custom query script.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01661505

Description:

Updating object type to detail and associating to a dimension, is generating an extra object in the query which cannot be removed

New Behavior:

Updating object type to detail and associating to a dimension, does not an extra object in the query

Limitations:

ADAPT01661619

Description:

BI 4 : Detail objects for merged dimensions are not showing when the alphabetical view is selected

New Behavior:

This problem is resolved

Limitations:

ADAPT01663518

Description:

Get Document InformationException (WRE99999) when trying to create a Live Office document.

New Behavior:

This problem is resolved

Limitations:

ADAPT01664552

Description:

When scheduling a Web Intelligence document, Web Intelligence Server session is not closed when schedule is done

New Behavior:

This issue has been resolved

Limitations:

ADAPT01664764

Description:

CR4E crashes with error message when 2nd hierarchy object is inserted in the report.

New Behavior:

This problem has been resolved.

Limitations:

ADAPT01665088

Description:

During installation of Information Steward 4.0 SP3 or 4.1 using BI 4.0 SP4 Patch 3 and Patch 4, a file already exists error is thrown when executing the following internal workflows:
1)   There is an InfoObject in the CMS that already has a set of files
2)   The user retrieves a file and both overwrites AND commits the RemoteFile.
3)   The user then updates the file in the InfoObject and the commits it.

New Behavior:

This problem is resolved from BI 4.0 Patch 4.5.

Limitations:

ADAPT01665286

Description:

When a user with restricted rights runs a query created by a user with more rights, the query terminates unexpectedly.

New Behavior:

This problem is resolved. The query returns an empty result set. In Web Intelligence, a message warns the user the report will be empty.

Limitations:

ADAPT01665514

Description:

SharePoint 2010 content will be displayed in English on IE browser with German language

New Behavior:

SharePoint 2010 Home site & Central Administration content will be displayed in English on IE browser with German language

Limitations:

Fixed Issues for SAP BusinessObjects Business Intelligence Suite 4.0 Support Package 4 Patch 6

ADAPT01524137

Description:

Life Cycle Environment breaks when configured with ISA reverse proxy

New Behavior:

Working as per behavior.

Limitations:

ADAPT01580268

Description:

Blank Web Intelligence report is generated when we mention a customized path for output cache directory and the image directory in the Web Intelligence processing server properties.

New Behavior:

Problem is resolved

Limitations:

ADAPT01598802

Description:

The Date may change when refreshing a Query as a Web Service (QaaWS) connection.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01599452

Description:

Hyperlinked Web Intelligence document shows in the first Web Intelligence document window. Two Web Intelligence documents are nested in the same window.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01606456

Description:

Cannot create new Information Space on a UNX universe based on Microsoft SQL Server 2008

New Behavior:

The issue has been fixed in full build SP4.

Limitations:

Workaround for SP4 patches (this is no longer necessary starting SP4 Patch 6 and SP5):
Edit Explorer Exploration Server command line parameters in CMC and replace
-Dbusinessobjects.connectivity.directory=
with
-connectivity_dir
Restart Exploration Server

ADAPT01615355

Description:

Selecting a report created off SAP as a dynamic recipient report gives the message: "CR Data Provider: Please check that "use same database logon as when report is run" option is set on the dynamic recipient document. crystal report error message: database logon failed.

New Behavior:

This issue now is resolved

Limitations:

ADAPT01615867

Description:

A 'processDPCommandsEx' API error is displayed in Web intelligence when trying to run a query with union/join

New Behavior:

Synchronization with union/join is forbidden. An "incompatible object" error is displayed.

Limitations:

ADAPT01635106

Description:

Web Intelligence Rich Client : Acces level security applied on objects of a universe designed with Information Design Tool may not be correctly taken account.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01643947

Description:

WebInteligenceReportServer process : Memory leaks detected.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01646721

Description:

It takes a long time to save a Web Intelligence document as Excel

New Behavior:

Time for saving a Excel has been reduced

Limitations:

ADAPT01648611

Description:

Large Web Intelligence reports are extremely slow to open in the Rich Internet Application and the Available Objects pane will not display.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01651150

Description:

The context menu should be displayed without delay when right-clicking the whole table in a Web Intelligence report.

New Behavior:

The problem is resolved.

Limitations:

ADAPT01653709

Description:

Fix the display issue of Input Text Area component under Dashboards Aqua theme

New Behavior:

The Input Text Area component works under Aqua theme.

Limitations:

ADAPT01653896

Description:

As a fix to ADAPT01653924 Atomic Security Commit is turned off during migration, as a result the discussion note objects fail to migrate on the first run.

New Behavior:

The discussion note objects are committed last, after all the security settings have been committed on their parent objects.

Limitations:

ADAPT01654678

Description:

Web intelligence functions still in English after modifying Product local to French

New Behavior:

This problem is resolved

Limitations:

ADAPT01655118

Description:

Error: "is not a valid NCName" is thrown on a block published from Webi when leaving the "Share report content for all consumers" option unchecked.

New Behavior:

This problem is resolved

Limitations:

ADAPT01655735

Description:

Web Intelligence - dHTML query panel : several prompted documents opened and refreshed in same time may result as "no data to retrieve" incorrect message.

New Behavior:

This problem is fixed.

Limitations:

ADAPT01658828

Description:

Added support for Server names longer than 64 characters.

New Behavior:

Auditing files with longer than 64 char server name are injected in the auditing database.

Limitations:

ADAPT01659040

Description:

DATE with Constant is not working in Web Intelligence when using Bex Query

New Behavior:

This issue has been resolved.
Limitations:

ADAPT01659371

Description:

 WebI Report functions which contain a space willl not validate correctly and generate error in Italian language version: "Identificatore non valido 'formato' alla posizione '1'(IES 10022)"

New Behavior:

This problem is resolved

Limitations:

ADAPT01659411

Description:

If a report is created using Dual Axes having custom values on each chart, the values are NOT retained if we the report is published to enterprise and refreshed; the Y axis values get reset to default.

New Behavior:

The above issues is resolved

Limitations:

ADAPT01659678

Description:

DB2 used to not support logging of columns over 1GB. The blob columns we use are all over 1GB so they were defined as not logged. This happened around 2006. Since then IBM created a failover multinode system called HADR. If one node failed the program would failover to the other node. The problem is that columns that are not logged may have not value on the other node. When the failover occurred the CMS thought the rows were corrupted so deleted them

New Behavior:

IBM DB2 HADR is only supported with DB2 v9.5 fixpak 5 (or newer) or DB2 9.7 fixpak 1 (or newer)

Limitations:

ADAPT01660445

Description:

Unable to copy object name using Ctrl+C in Web Intelligence query panel and paste it into an external program.

New Behavior:

This issue has been resolved

Limitations:

ADAPT01661076

Description:

For Java Designer while switching data source only data fields referenced in the report were getting shown in the source in the data mapping dialogue.
For instance, the fields used in formulaes that were not used in the reports didn't show up in the source causing warning errors after "successful mapping" suggesting some objects have been removed.

New Behavior:

The fix involves changes when fetching source data fields. This new function does two things differently than previously:
1) Now unused user created formulas for field references will get shown while mapping.
2) For DSL tables all the fields will be included. This is to retain the structure of the DSL query.
This change does not affect the report definitions concept of which fields are in use.In the DSL case the previously unmapped fields will now be included in the data foundation so that the query will not be seen as having changed.

Limitations:

ADAPT01661216

Description:

The option of "Graphical Attributes for Lines" is missing from Web Intelligence graph.

New Behavior:

Problem is resolved

Limitations:

ADAPT01661640

Description:

For AIX its not possible to save any crystal report from Crystal Reports Enterprise 4.0 Designer to the SAP Business Objects Enterprise server when SAP JVM is used.
This issue was very specific to the customer environment.

New Behavior:

Following config setting (work around) was suggested to the customer which helped resolve the issue.
The SAP JVM has a work-around (-Dsun.java2d.print.polling=false

Limitations:

ADAPT01661659

Description:

Query as a Web Service connections may not work correctly when QaaWS Accelerator is enabled.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01661699

Description:

In the Mobile BI app on Ipad charts show "Data not available" after filtering a second time

New Behavior:

Issue is resolved

Limitations:

ADAPT01662222

Description:

Some charts are showing content not supported

New Behavior:

Issue is fixed

Limitations:

ADAPT01662377

Description:

The Default URL box, Save and Save & Close buttons are getting disabled and grayed out.

New Behavior:

The issue is Fixed.

Limitations:

ADAPT01663004

Description:

Unable to add attributes of one dimension object into business layer based on JCO connection via "Insert Candidate Objects" function in IDT if the dimension objects has existed in business layer.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01663664

Description:

When you refresh a WebIntelligence report with query stripping enabled and if one the stripped objects doesn't belong anymore to the associated BEX Query, an exception is raised.

New Behavior:

This problem has been resolved.

Limitations:

ADAPT01663725

Description:

Converted dashboard (From BO 3.1 SP 3 FP 3.6 to 4.0 SP4 FP4.2) is taking 2 and a half minutes to refresh where it was 10 seconds in 3.1.

New Behavior:

This problem is resolved

Limitations:

ADAPT01663880

Description:

Log on BI Launchpad and try to open the migrated report. following error occurred:....
internal error occured while calling 'getMap'API. (Error:ERR_WIS_30270) (Error: INF)....
All the report created in XI31 SP5 can not be opened after migration to BI4.0 SP4 Patch2 and Patch3.

New Behavior:

This problem is resolved

Limitations:

ADAPT01664174

Description:

Break functionality does not work as expected when applied to a table containing two columns with the same object.

New Behavior:

This problem is resolved.

Limitations:

ADAPT01664548

Description:

In WebIntelligence reports, the last refresh date and month on prompt in interactive mode is still showing in English even when the product locale is set to Russian.

New Behavior:

This problem has been resolved.

Limitations:

ADAPT01664746

Description:

In the document properties on a WebIntelligence report, the keyword 'Keydates' is in English even if the product locale is set to Russian.

New Behavior:

This problem has been resolved.

Limitations:

ADAPT01664757

Description:

Filter and Axis buttons in "Document Structure and Filters" pane of WebIntelligence reports still shows in English even if the product locale is set to Russian.

New Behavior:

This problem has been resolved.

Limitations:

ADAPT01664778

Description:

In the WebIntelligence reports, the check box 'Filter objects to current selection' is still showing in English instead of Russian in the input control creation pane.

New Behavior:

This problem has been resolved.

Limitations:

ADAPT01664884

Description:

Web Intelligence dHTML fails to strip query when there is a prompt from a BEx variable or a Query Filter

New Behavior:

This problem is resolved

Limitations:

ADAPT01665238

Description:

In WebIntelligence reports, the translation of 'Select report objects' in Russian is incorrect in both applet and dhtml modes.

New Behavior:

This problem has been resolved.

Limitations:

ADAPT01665250

Description:

When you refresh WebIntelligence reports with prompt, the message "retrieving data" as well as minutes and seconds are still showing in English and not Russian.

New Behavior:

This problem has been resolved.

Limitations:

ADAPT01665919

Description:

In Central Management Console the default viewer URL cannot be edited after its deleted.

New Behavior:

The issue is fixed.

Limitations:

ADAPT01665938

Description:

Added connector property "unicodeStrings" to manage Unicode values for MSU queries.

New Behavior:

1) MSU (multi-source universes):
(to manage Unicode values in Business Layer queries, the prerequisite is that in "Data Federation Administration Tool" at connector level, the connector property "unicodeStrings" should be set to "true".)

2) SSU (single-source universes):
(to manage Unicode values in Business Layer queries, the prerequisite is that in "Information Design Tool", inside the Business Layer Parameters, the query script parameter "UNICODE_STRINGS" should be added and set to "Yes")
Limitations:

ADAPT01665956

Description:
Having a line break in table text wraps the table by default in Mobi
New Behavior:
Issue is fixed
Limitations:

ADAPT01666051

Description:
Error 'QuerySpecification' and not 'DP' when executing a modified query in WebIntelligence BI Launchpad
New Behavior:
This issue has been resolved
Limitations:

ADAPT01666073

Description:
Level Attribute MEMBER_NAME returns no value.
New Behavior:
This problem has been resolved.
Limitations:

ADAPT01666201

Description:
@Variable() function may not be replaced.

If a universe (Unx) object definition contains a @Variable() function statement and if the object is part of a hierarchycal list of value defintion, the @Variable function may not be replaced when executing a query, creating an error.
New Behavior:
This problem is resolved.
Limitations:

ADAPT01666270

Description:
BI4.0: When using WebI in Turkish language, functions containing a space do not validate correctly and generate errors: IES10060,IES10022 and IES10036
New Behavior:
This problem is resolved
Limitations:

ADAPT01666285

Description:

LCM doesnot promote objects from prior to Aurora FP03 when security is enabled.
New Behavior:
Fixed
Limitations:

ADAPT01666328

Description:
Optional prompt List of Values and selections are not visible when "set as prompt" is unchecked for one or more optional prompts in the "Set Variables" window
New Behavior:
This issue has been resolved.
Limitations:

ADAPT01666465

Description:
Expand on Hierarchical Node does not work in a report with sections
New Behavior:
Issue is fixed
Limitations:

ADAPT01666873

Description:
Web Intelligence Java report panel Japanese characters (Kanji) cannot be entered in search text box of search universe dialog box when creating a new WebI document
New Behavior:
This issue has been resolved
Limitations:

ADAPT01666885

Description:
Generate core dump during recycling of Web Intelligence Processing Server
New Behavior:
This issue has been resolved
Limitations:

ADAPT01666916

Description:
Unable to edit a Web Intelligence document with dHTML client, an error WIH 444444 is displayed
New Behavior:
This issue has been resolved
Limitations:

ADAPT01667206

Description:
When using a custom SQL statement into Web Intelligence query panel and click on the 'SAVE' button, then this SQL statement is executed 4 times in the background.
New Behavior:
This issue has been resolved.
Limitations:

ADAPT01667364

Description:

When navigating through Hana based EViews, unnecessary requests were sent to the Hana server, causing performance issues.

New Behavior:

The issue has been fixed

Limitations:

ADAPT01667444

Description:

Last Refresh Date shows same with timezone of BOE which is installed on AIX

New Behavior:

This problem is resolved

Limitations:

ADAPT01667890

Description:

BI4.0: Copy & Paste shortcut keys don't work when using 'Web' mode as View and Edit Preferences

New Behavior:

This problem is resolved

Limitations:

ADAPT01669647

Description:

A BW error message appears while displaying the list of values in Web Intelligence when mandatory variables are not answered

New Behavior:

This problem has been resolved.

Limitations:
