Note Language: English   Version: 3 Validity: Valid Since 22.02.2013

Summary

Symptom
You want to install SAP HANA using VMware vSphere virtual machines

Other terms

Reason and Prerequisites
SAP HANA SP5
Certified SAP HANA Appliances pre-installed with VMware vSphere

Solution
SAP announced the planned availability of SAP HANA running on VMware vSphere virtual machines based on SAP HANA SP5.

VMware vSphere is supported in the following configurations:
- Delivered pre-installed on certified SAP HANA Appliances with SAP HANA software
- Supported for certified SAP HANA appliances only
- For non-production SAP HANA instances use only
- Multiple virtual machines can be deployed on a single SAP HANA appliance. Each SAP HANA instance deployed on a virtual machine is recommended to be sized the same as SAP HANA deployed on "bare metal" SAP HANA appliances. See FAQ for more info.
- For single node (non-clustered) SAP HANA deployments

This note will be continuous updated with the latest support information.

VMware vSphere is licensed and supported by the SAP HANA appliance vendor. Please contact your appliance vendor from more information.

Please see the attached FAQ for more information on the new support and the specifics on supported use cases.

Header Data

Release Status: Released for Customer
Released on: 27.11.2012   21:01:14
Master Language: English
Priority: Recommendations/additional info
Category: Consulting
Primary Component: BC-DB-HDB SAP HANA database
