Business Suite --> Products powered by SAP HANA --> SAP ERP 6.0, SAP Enhancement Package 6, Version for SAP HANA.

Solution

HANA multi-node configurations are used for different purposes:

- a) High-availability with standby nodes
- b) Scaling memory (scale-out)

See also chapters 10 and 14.3 of the HANA Administration Guide (http://help.sap.com/hana/hana_admin_en.pdf).

The following restrictions for usage of

SAP EHP 6 for SAP ERP 6.0, version for SAP HANA

SAP EHP 2 for SAP CRM 7.0, version for SAP HANA

SAP EHP 2 for SAP SCM 7.0, version for SAP HANA

apply:

Ad a) High availability scenarios in a multi-node cluster with a standby-node are released for the Suite on HANA ramp-up, but restricted to the simplest case of two servers (one worker, one standby) only, since scale-out in general is not yet supported for Suite on HANA.

SAP Note 1825774 - SAP Business Suite Powered by SAP HANA - Multi-Node Support

Ad b) Scale-out scenarios with multiple worker nodes to scale memory are not yet released for Suite on HANA. It is recommended to scale-up memory by using a hardware configuration that maximizes the available database memory.
