Summary

Symptom
Central Note for SAP Business Planning and Consolidation 10.0 SP10, version
for the Microsoft platform

Other terms
Resolved issues, installation instructions, upgrade instructions, central
note

Reason and Prerequisites
SAP Business Planning and Consolidation 10.0 SP10 is available as a full
installation for new customers as well as an upgrade to existing
installations (depending on previous version and system landscape
considerations).

For information about prerequisites and the procedure for new
installations, see the Installation Guide for SAP Business Planning and
Consolidation 10.0 for the Microsoft platform, available on SAP Service
Marketplace at http://service.sap.com/instguidesEPM-BPC > 10.0, version for
the Microsoft platform.

For information about downloading installation files and upgrading existing
installations, see the Upgrade Guide for SAP Business Planning and
Consolidation 10.0 for the Microsoft platform, available on SAP Service
Marketplace at http://service.sap.com/instguidesEPM-BPC > 10.0, version for
the Microsoft platform.

Support package 10 is cumulative; it includes all the fixes and updates
from SP01 to SP09 and any patches between them.

Solution
This note contains essential information about the implementation of
Planning and Consolidation 10.0 SP10 and its Edge version, which has the
same functionality as Planning and Consolidation 10.0 SP10 except it has a
limitation of 100 users.

Before proceeding with the installation, read the Related Notes listed
below.

Download and Installation Instructions

To download and install Planning and Consolidation 10.0, perform the
following steps:

1. To download the latest version of Planning and Consolidation 10.0, go to
http://service.sap.com/swdc -> Software Downloads -> Support Packages and
Patches -> A - Z Index -> "B" -> SAP BPC FOR MICROSOFT -> SBOP PC 10.0 FOR
MICROSOFT -> Comprised Software Component Versions -> SAP CPM BPC 10.0 M ->
Windows Server on x64 64bit -> Downloads.

2. Click on the component and add the component to your Download Basket.
Download the components from the Download Basket using SAP Download
Manager.

3. Decompress the ZIP file that you downloaded from SMP on the Planning and Consolidation Application Server.

4. From the Planning and Consolidation Setup folder, run Startup.exe.

5. From the Server Install screen, select "Install the Planning and Consolidation server" and follow the instructions provided.

To download the latest support package for the EPM Solutions add-in for Microsoft Office, go to Software Downloads -> Support Packages and Patches -> Browse our Download Catalog -> SAP Application Components -> SAP BPC FOR SAP NETWEAVER -> SBOP PC 10.0 FOR SAP NW -> Comprised Software Component Versions -> SBOP EPM EXCEL CLIENT 10.0.

Installation-related Information

You need to provide the System Admin ID, Admin ID, User ID and corresponding passwords that you set during the initial setup of the system.

If the EPM10.0 (prior to SP09) version of the SAP BusinessObjects EPM Solutions, add-in for Microsoft Office or Administration client has been installed on client machines, you can automatically upgrade them by turning on the Client Auto Update option in Server Manager. For more information, see the SAP Planning and Consolidation 10.0 for the Microsoft Platform Upgrade Guide.

If you want to use CMS for Planning and Consolidation authentication, you must install UMC 10 (User Management Client) for each application server before you start the installation. For more information, see the SAP Planning and Consolidation 10.0 for the Microsoft Platform Master Guide.

For information on installing "Update for the .NET Framework 4 (KB2468871)" as a prerequisite before installing Planning and Consolidation, refer to articles 2520479 and 2468871 on the Microsoft Support portal at www.support.microsoft.com.

For information on migration steps to apply to support packages before SP08, see the SAP Business Planning and Consolidation 10.0 for the Microsoft Platform Upgrade Guide, available on SAP Service Marketplace at http://service.sap.com/instguidesEPM-BPC > 10.0, version for the Microsoft platform.

What's New

- o   New platform support:

    - Microsoft Windows 8

    - Microsoft Internet Explorer 10

    - Firefox 19.0.2.

- o   Calc account supports G-type dimension. See note 1834811.

- o   The model parameter JRN_VALIDATION_SP is enhanced. See note 1834698.

o   With YTD measure, export data can be calculated and returned even
though there is no signed data. See note 1776164.

Migration from 7.0M or 7.5M

Perform the following steps to migrate applications and application sets
from 7.0M or 7.5M to 10.0. Note that in version 10.0, applications and
application sets are called models and environments, respectively.

Prerequisites

1. If you want to keep and refer to a previous version of ApShell, back it
up using Server Manager before uninstalling 7.5. The name of the sample
database in EPM 10 is EnvironmentShell. You can restore the ApShell by
running 'Restore database' in Server Manager.

2. The upgrade program prompts you for newer versions of AntiXssLibrary.dll
than used in earlier versions of Planning and
Consolidation. Download AntiXssLibrary.dll version 4.2. For more
information about how to download this file, see the
SAP BusinessObjects Planning and Consolidation 10.0 for the Microsoft
Platform Installation Guide, available on SAP Service Marketplace at
http://service.sap.com/instguidesEPM-BPC > 10.0, version for the Microsoft
platform.

3. Reports generated in the 7.0 or 7.5 Excel client that use the EvDRE
function can be used in EPM add-in without any migration step. If you want
to keep existing EvDRE reports, they do not require migration; you can open
and use them. Some behavior differences exist between version 7.0/7.5 and
EPM10. For more information, see the SAP BusinessObjects EPM solutions,
add-in for Microsoft Office help.

Procedure

1. The Microsoft Windows AD authentication type in CMS does not allow you
to use a user account that contains Unicode (non-ASCII) characters, as a
relevant Java Kerberos library does not support Unicode compatibility. If
you want to use the account in Planning and Consolidation, modify the
account name in CMS before assigning the user to Planning and
Consolidation. See SAP Note 1383674.

2. Planning and Consolidation does not allow using the characters \ / : * ?
" < > | ;, in the account name (User ID) in CMS authentication mode because
the Microsoft Windows file system does not support these characters for
file names and folder names.

NOTE: If an account name contains these characters, the account
name should be modified in the CMS console in advance by the administrator
before the user is assigned to Planning and Consolidation.

3. ApShell in 7.5 includes the "Import SQL" or "Import SQL into
Fact" packages that prompt you to enter the SQL database. (In versions
5.1 and 7.0, the prompt was missing.) To apply the packages, copy the
packages from EnvironmentShell to your model after upgrading to EPM10.
Then modify the package script for your model dimensions. See SAP Note
1355877.

Copy from:

<FileServer>\WebFolders\EnvironmentShell\Planning\DataManager\Packa
geFiles\Examples

Copy to:

<FileServer>\WebFolders\<Environment>\<Model>\DataManager\
PackageFiles\Examples

4. If your previous environment (application set) has a custom OLAP
partition, you must recreate the partition after restoring the environment.
See SAP Note 1395795.

Known Issues
For information on limitations in Planning and Consolidation, see SAP note
1584431.

Resolved Issues
See the related notes listed below for information about the issues
resolved in this support package.
